:testatv/bat/r/cacaa/\_a/:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

; GENERAL INFORMATION:
; APPLICANT:
; TITLE OF INVENTION: Novel integrin alpha subunit
; NUMBER OF SEQUENCES: 25
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Wolf, Greenfield and Sacks, P.C.
; STREET: 600 Atlantic Avenue
; CITY: Boston
; STATE: MA
; COUNTRY: USA
; ZIP: 02210
; COMPUTER READABLE FORM:
; MEDIUM TYPE: Floppy disk
; COMPUTER: IBM PC compatible
; OPERATING SYSTEM: PC-DOS/MS-DOS
; SOFTWARE: PatentIn Release #1.0, Version #1.25
; CURRENT APPLICATION DATA:
; APPLICATION NUMBER: PCT/US95/02044
; FILING DATE: herewith
; CLASSIFICATION:
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: 08/199,776
; FILING DATE: 18 February 1994
; ATTORNEY/AGENT INFORMATION:
; NAME: Plumer, Elizabeth R.
; REGISTRATION NUMBER: 36,637
; REFERENCE/DOCKET NUMBER: B0801/7020
; TELECOMMUNICATION INFORMATION:
; TELEPHONE: 617-720-3500
; TELEFAX: 617-720-2441
; INFORMATION FOR SEQ ID NO: 8:
; SEQUENCE CHARACTERISTICS:
; LENGTH: 10 amino acids
; TYPE: amino acid
; STRANDEDNESS: single
; TOPOLOGY: linear
; MOLECULE TYPE: peptide
; HYPOTHETICAL: YES
; ANTI-SENSE: NO
; FRAGMENT TYPE: internal
; ORIGINAL SOURCE:
; ORGANISM: Homo sapiens

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT treating central nervous system diseases and bacterial and viral  
PT infections, comprises administering colostrin as an immunological  
PT regulator -

XX Claim 1; Page 34; 50pp; English.

XX Sequences AAB72246 - AAB72275 represent peptides derived from colostrin,  
CC a proline rich polypeptide aggregate contained in colostrum. The  
CC peptides have immune response modulatory activity, and are capable of  
CC inducing cytokines. Colostrin and its derived peptides are useful for  
CC inducing cytokine production, for modulating an immunological response  
CC and for inducing blood cell proliferation. The peptides are useful in the  
CC treatment of disorders of the central nervous system, neurological  
CC disorders, mental disorders, dementia, neurodegenerative diseases,  
CC Alzheimer's disease, motor neuron disease, psychosis, neurosis, chronic  
CC disorders of the immune system, bacterial and viral infections and  
CC acquired immunological deficiencies.

PT diagnosis of male infertility

XX Example 9; Page 19; 29pp; German.

XX This sequence represents a novel human epididymis-specific protein, HE4  
CC epitope fragment. This protein may be used for cloning and for expression  
CC of human epididymis-specific polypeptides in prokaryotic or eukaryotic  
CC host cells. Such proteins and antibodies generated from them may be used  
CC for diagnosis of e.g. male infertility. The polypeptides and antibodies  
CC may also be used for treatment of male infertility and for  
CC immunosterilisation of mammals.

 DR Detecting expression of OB-cadherin or N-cadherin used for diagnosing  
 PT and evaluating cancer  
 PT Disclosure; Page 19, 56pp; English.  
 XX The present invention describes methods which have been developed for  
 CC detecting and evaluating cancer that are based on the finding that  
 CC OB-cadherin and N-cadherin are expressed by metastatic carcinoma cells,  
 CC but not by highly differentiated, poorly invasive carcinomas. A method  
 CC for determining the presence or absence of a cancer in a patient  
 CC comprises: (1) contacting a biological sample from the patient with a  
 CC binding agent that specifically binds to OB- or N-cadherin OR with an  
 CC oligonucleotide that hybridises to a polynucleotide that encodes OB- or  
 CC N-cadherin; and (2) detecting in the sample an amount of polypeptide  
 CC that binds to the binding agent OR the amount of polynucleotide that  
 CC hybridises to the oligonucleotide, relative to a predetermined cut-off  
 CC value, and determining the presence or absence of cancer in the patient  
 CC from this. The methods from the present invention can be used to  
 CC determine the metastatic potential of a cancer. The methods may be used  
 CC to detect a metastatic cancer in a patient, to monitor progression of a  
 CC cancer, or to evaluate the metastatic potential of a cancer. Cancers  
 CC which may be evaluated using the methods include leukemia, prostate  
 CC cancer, breast cancer and ovarian cancer. AAY73501 to AAY73813 represent  
 CC peptide sequences used in the exemplification of the present invention.  
 CC Specifically, AAY73503 to AAY73789 represent OB-cadherin cell adhesion  
 CC recognition (CAR) peptides and AAY73790 to AAY73808 represent N-cadherin  
 CC CAR peptides. AAZ47906 to AAZ47915 represent PCR primers used in examples  
 CC from the present invention.

 XX New cadherin modulating agents, used for modulating nonclassical  
 PT cadherin-mediated functions for treating e.g. cancers, obesity,  
 PT rheumatoid arthritis, multiple sclerosis, diabetes or a neurological  
 PT disease  
 XX Claim 18; Page 159; 252pp; English.  
 XX The present invention describes cadherin modulating agents (MA)  
 CC comprising peptides which comprise a nonclassical cadherin cell adhesion  
 CC recognition (CAR) sequence. The MAs can be used for modulating  
 CC nonclassical cadherin-mediated functions. They can be used for e.g.  
 CC inhibiting adhesion of nonclassical-cadherin expressing cells in a  
 CC mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in  
 CC a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting  
 CC angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-  
 CC expressing cell, preventing or treating obesity in a mammal, stimulating  
 CC blood vessel regression in a mammal, enhancing drug delivery to the  
 CC central nervous system, treating a demyelinating neurological disease,  
 CC increasing vasopermeability in a mammal, enhancing adhesion of  
 CC nonclassical cadherin-expressing cells, inhibiting synaptic stability in  
 CC a mammal, or preventing pregnancy in a mammal. They can also be used for  
 CC healing or reducing scar tissue, or enhancing adhesion of foreign tissue  
 CC in a mammal. They can also be used for treating e.g. psoriasis,  
 CC arthritis, age-related macular degeneration, multiple sclerosis and  
 CC diabetes. The products can also be used for detection and diagnosis and  
 CC in bioreactors AAY60592 to AAY64572 represent specifically claimed  
 CC peptides, and AAY64573 to AAY64643 and AAY633183 to AAY633186 represent  
 CC sequences used in the exemplification of the present invention.

XX
XX Diagnosing or evaluating metastatic potential of cancer in patient by
XX contacting biological sample obtained from patient with specified
XX binding agent or oligonucleotide, and detecting polypeptide that binds
XX to the binding agent -
XX
XX Disclosure; Page 7; 94pp; English.
XX
XX The invention discloses a method for diagnosing or evaluating metastatic
XX potential of cancer in a patient. The method comprises contacting a
XX biological sample obtained from the patient with a binding agent
XX preferentially antibodies or cell adhesion recognition (CAR) sequences,
XX that specifically bind to OB-cadherin or N-cadherin or an oligonucleotide
XX that hybridises to a polynucleotide encoding OB-cadherin or N-cadherin
XX and then detecting the amount of polypeptide that binds to the binding
XX agent. The inventive method is useful for diagnosing or evaluating
XX metastatic potential of cancer, such as prostate, ovarian or breast
XX cancer, as well as leukaemia in a patient. It can also be employed for
XX monitoring the progression of cancer in a patient. The inventive method
XX provides accurate diagnosis or evaluation of metastatic potential of
XX cancer in a patient in a simple and economical manner. The sequences
XX presented in ABU59970-ABU60210 are the OB-cadherin cyclic CAR sequences.

XX
XX Novel cell adhesion modulating agent useful for e.g. modulating cell
XX adhesion of OB-cadherin-expressing cells and enhancing the delivery of
XX a drug to a tumour, comprises a native OB-cadherin cell adhesion
XX recognition sequence -
XX
XX Disclosure; Column 3; 42pp; English.
XX
XX The invention relates to a cell adhesion modulating agent comprising a
XX peptide four to nine amino acids in length that detectably inhibits
XX OB-cadherin mediated cell adhesion, consisting of a native OB-cadherin
XX cell adhesion recognition (CAR) sequence that comprises the sequence DDK
XX and optionally a residue on one or both sides of the CAR sequence to
XX facilitate cyclisation. The modulating agent is useful for modulating
XX cell adhesion of OB-cadherin-expressing cells and for enhancing the
XX delivery of a drug to a tumour or to the central nervous system in a
XX mammal. The agent is also useful for treating cancer and/or inhibiting
XX invasion and metastasis of a cancer. The agent is further useful for
XX stimulating blood vessel regression, for enhancing wound healing in a
XX mammal, for enhancing adhesion of foreign tissue implanted within a
XX mammal, for increasing vasopermeability in a mammal, for disrupting cell
XX adhesion mediated by multiple adhesion molecules, to facilitate cell
XX identification, sorting in vitro or imaging in vivo and for permitting
XX the selection of cells expressing OB-cadherin. This sequence represents
XX an OB-cadherin CAR sequence cyclic peptide analogue, used as a cell
XX adhesion modulating agent.

 XX Detecting expression of OB-cadherin or N-cadherin used for diagnosing  
 PT and evaluating cancer -  
 XX  
 PS Disclosure; Page 19; 56pp; English.  
 XX  
 CC The present invention describes methods which have been developed for  
 CC detecting and evaluating cancer that are based on the finding that  
 CC OB-cadherin and N-cadherin are expressed by metastatic carcinoma cells,  
 CC but not by highly differentiated, poorly invasive carcinomas. A method  
 CC for determining the presence or absence of a cancer in a patient  
 CC comprises: (1) contacting a biological sample from the patient with a  
 CC binding agent that specifically binds to OB- or N-cadherin OR with an  
 CC oligonucleotide that hybridizes to a polynucleotide that encodes OB- or  
 CC N-cadherin; and (2) detecting in the sample an amount of polypeptide  
 CC that binds to the binding agent OR the amount of polynucleotide that  
 CC hybridizes to the oligonucleotide, relative to a predetermined cut-off  
 CC value, and determining the presence or absence of cancer in the patient  
 CC from this. The methods from the present invention can be used to  
 CC determine the metastatic potential of a cancer. The methods may be used  
 CC to detect a metastatic cancer in a patient, to monitor progression of a  
 CC cancer, or to evaluate the metastatic potential of a cancer. Cancers  
 CC which may be evaluated using the methods include leukemia, prostate  
 CC cancer, breast cancer and ovarian cancer. AAY73501 to AAY73813 represent  
 CC peptide sequences used in the exemplification of the present invention.  
 CC Specifically, AAY73503 to AAY73789 represent OB-cadherin cell adhesion  
 CC recognition (CAR) peptides and AAY73790 to AAY73808 represent N-cadherin  
 CC CAR peptides. AAZ47906 to AAZ47915 represent PCR primers used in examples  
 CC from the present invention.

 XX  
 PS Claim 18; Page 159; 252pp; English.  
 XX  
 CC The present invention describes cadherin modulating agents (MA)  
 CC comprising peptides which comprise a nonclassical cadherin cell  
 CC recognition (CAR) sequence. The MAe can be used for modulating  
 CC nonclassical cadherin-mediated functions. They can be used for e.g.  
 CC inhibiting adhesion of nonclassical-cadherin expressing cells in a  
 CC mammal, enhancing delivery of a drug through the skin of a mammal,  
 CC enhancing delivery of a drug to a tumour in a mammal, treating cancer in  
 CC a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting  
 CC angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-  
 CC expressing cell, preventing or treating obesity in a mammal, stimulating  
 CC blood vessel regression in a mammal, enhancing drug delivery to the  
 CC central nervous system, treating a demyelinating neurological disease,  
 CC increasing vasopermeability in a mammal, enhancing adhesion of  
 CC nonclassical cadherin-expressing cells, inhibiting synaptic stability in  
 CC a mammal, or preventing pregnancy in a mammal. They can also be used for  
 CC e.g. enhancing or directing neurite outgrowth, facilitating wound tissue  
 CC healing or reducing scar tissue, or enhancing adhesion of foreign tissue  
 CC in a mammal. They can also be used for treating e.g. psoriasis,  
 CC arthritis, age-related macular degeneration, multiple sclerosis and  
 CC diabetes. The products can also be used for detection and diagnosis and  
 CC in bioreactors. AAY60592 to AAY64572 represent specifically claimed  
 CC peptides, and AAY64573 to AAY64643 and AAZ33183 to AAZ33186 represent

XX Modulating a biological function of an endothelial cell or  
 PT hematopoietic cell, useful for treating autoimmune diseases and  
 PT infectious diseases, by administering an antagonist that inhibits  
 PT binding between a PDZ protein and a PL protein -

XX Disclosure; Page 87-94; 141pp; English.

XX The present invention relates to a new method for modulating a  
 CC biological function of an endothelial cell or hematopoietic cell. The  
 CC method involves introducing into a cell, an antagonist that inhibits  
 CC binding between a PDZ protein and a PL protein. The inhibitor is used  
 CC to treat a disease mediated by hematopoietic cells, e.g. autoimmune  
 CC disease. It may also be used to prevent transplantation rejection of  
 CC a solid organ transplant. The method may also be used in the treatment  
 CC of inflammation, allergy, inflammatory bowel diseases, ulcerative  
 CC colitis, ileitis, psoriasis, asthma, atopic dermatitis, autoimmune  
 CC diseases (e.g. rheumatoid arthritis, multiple sclerosis,  
 CC insulin-dependent diabetes, Hashimoto thyroiditis, osteoarthritis,  
 CC graft rejection, transplantation rejection), atherosclerosis, cancers,  
 CC infectious diseases, ischemia, vasculitis and Crohn's disease.

XX New inhibitors of binding of a PDZ protein and PL protein for  
 PT inhibiting T cell-mediated response by hematopoietic cells, or for  
 PT treating diseases characterized by inflammatory and humoral immune  
 PT responses, e.g. inflammation, cancer -

XX Disclosure; Page 93; 139pp; English.

XX The present invention relates to a method for modulating a biological  
 CC function of an endothelial cell or hematopoietic cell, comprises  
 CC introducing into a cell an antagonist that inhibits binding between a  
 CC PDZ domain protein and a PL domain protein to result in inhibition of  
 CC leukocyte activation. The present sequence is a core sequence of a PL  
 CC domain protein (a T cell surface receptor). PDZ domains of proteins are  
 CC named after three prototypical proteins: PSD95, Drosophila large disc  
 CC protein and Zonula Occludin 1 protein. PDZ domain proteins are involved  
 CC in synapse formation by organising transmembrane neurotransmitter  
 CC receptors through intracellular interactions. The inhibitors identified  
 CC by the present invention can be used to treat a disease mediated by  
 CC hematopoietic cells, e.g. autoimmune disease, inflammation, allergy  
 CC (e.g. drug allergies), inflammatory bowel diseases, ulcerative colitis,  
 CC ileitis, psoriasis, respiratory allergic diseases (e.g. asthma), atopic  
 CC dermatitis, autoimmune diseases (e.g. rheumatoid arthritis, multiple  
 CC sclerosis, insulin-dependent diabetes, Hashimoto thyroiditis,  
 CC osteoarthritis), atherosclerosis, cancers, infectious diseases (e.g.  
 CC viral infection), ischaemia, vasculitis and Crohn's disease. The  
 CC inhibitors can also be used to prevent transplantation rejection of a  
 CC solid organ transplant.

 XX Modulating the biological function of an endothelial cell or  
 PT haematopoietic cell e.g., a T-cell or B-cell comprises introducing into  
 PT the cell, an agent that inhibits binding of a PDZ protein and a PDZ  
 PT ligand protein in the cell -  
 XX  
 XX Disclosure; Page 135; 207pp; English.  
 PS  
 XX The present invention describes a method (M1) for modulating a biological  
 CC function of an endothelial cell or haematopoietic cell. M1 comprises  
 CC introducing into the cell, an agent that inhibits binding of a PDZ  
 CC (PSD95, Drosophila large disc protein, and Zonula Occludin 1 protein)  
 CC protein and a PDZ ligand (PL) protein in the cell, and so modulates the  
 CC biological function. Also described is a method (M2) for determining  
 CC whether a test compound is an inhibitor of binding between a PDZ protein  
 CC and a PL protein. M1 is used for modulating a biological function of an  
 CC endothelial cell or haematopoietic cell e.g., T-cell or B-cell, by an  
 CC inflammatory or humoral immune response, or an autoimmune disease. An  
 CC inhibitor (I) is useful for treating a disease characterised by leukocyte  
 CC activation, where the disease is characterised by an inflammatory or  
 CC humoral immune response, e.g., an autoimmune disease. The compounds  
 CC e.g., PL-PDZ interaction inhibitors are useful for treating (ameliorating  
 CC symptoms of) a variety of diseases and conditions characterised by  
 CC inflammatory and humoral immune responses e.g., inflammation, allergy,  
 CC inflammatory bowel diseases, ulcerative colitis, ileitis and enteritis,  
 CC psoriasis and inflammatory dermatoses, scleroderma, respiratory allergic  
 CC diseases such as asthma, allergic rhinitis, transplantation rejection  
 CC (cardiac, kidney, lung, liver, small bowel, cornea, pancreas, cadaver,  
 CC autologous, bone marrow, xenotransplantation), atherosclerosis, cancers,  
 CC angiogenesis-dependent disorders, infectious diseases and ischaemia.  
 CC ABQ96620 to ABQ96732 and ABP63153 to ABP63578 represent sequences used  
 CC in the exemplification of the present invention.

XX Diagnosing or evaluating metastatic potential of cancer in patient by
PT contacting biological sample obtained from patient with specified
PT binding agent or oligonucleotide, and detecting polypeptide that binds
PT to the binding agent
XX
XX Disclosure; Page 7; 94pp; English.
XX
XX The invention discloses a method for diagnosing or evaluating metastatic
CC potential of cancer in a patient. The method comprises contacting a
CC biological sample obtained from the patient with a binding agent,
CC preferentially antibodies or cell adhesion recognition (CAR) sequences,
CC that specifically bind to OB-cadherin or N-cadherin or an oligonucleotide
CC that hybridises to a polynucleotide encoding OB-cadherin or N-cadherin
CC and then detecting the amount of polypeptide that binds to the binding
CC agent. The inventive method is useful for diagnosing or evaluating
CC metastatic potential of cancer, such as prostate, ovarian or breast
CC cancer, as well as leukaemia in a patient. It can also be employed for
CC monitoring the progression of cancer in a patient. The inventive method
CC provides accurate diagnosis or evaluation of metastatic potential of
CC cancer in a patient in a simple and economical manner. The sequences
CC presented in ABUS9970-ABU60210 are the OB-cadherin cyclic CAR sequences.

PT Novel cell adhesion modulating agent useful for e.g. modulating cell  
 PT adhesion of OB-cadherin-expressing cells and enhancing the delivery of  
 PT a drug to a tumour, comprises a native OB-cadherin cell adhesion  
 PT recognition sequence -  
 XX  
 XX Disclosure; Column 3; 42pp; English.  
 XX  
 CC The invention relates to a cell adhesion modulating agent comprising a  
 CC peptide four to nine amino acids in length that detectably inhibits  
 CC OB-cadherin mediated cell adhesion, consisting of a native OB-cadherin  
 CC cell adhesion recognition (CAR) sequence that comprises the sequence DDK  
 CC and optionally a residue on one or both sides of the CAR sequence to  
 CC facilitate cyclisation. The modulating agent is useful for modulating  
 CC cell adhesion of OB-cadherin-expressing cells and for enhancing the  
 CC delivery of a drug to a tumour or to the central nervous system in a  
 CC mammal. The agent is also useful for treating cancer and/or inhibiting  
 CC invasion and metastasis of a cancer. The agent is further useful for  
 CC stimulating blood vessel regression, for enhancing wound healing in a  
 CC mammal, for enhancing adhesion of foreign tissue implanted within a  
 CC mammal, for increasing vasopermeability in a mammal, for disrupting cell  
 CC adhesion mediated by multiple adhesion molecules, to facilitate cell  
 CC identification, sorting in vitro or imaging in vivo and for permitting  
 CC the selection of cells expressing OB-cadherin. This sequence represents  
 CC an OB-cadherin CAR sequence cyclic peptide analogue, used as a cell  
 CC adhesion modulating agent.

PT Synthetic vaccine - contains peptide residue coupled to higher

PT alkyl or alkenyl Gps. and with 6 amino acids in residue  
 XX  
 XX Claim 33; Page 44; 54pp; English.

XX The inventors claim a synthetic vaccine which comprises a peptide  
 CC residue coupled to an alkyl or alkenyl gp. having at least 12C, or  
 CC other lipophilic substance. The residue contains a sequence of 6 AAs  
 CC corresp. to the SQ of such AAs in a protein antigen or allergen where  
 CC the greatest local average hydrophilicity is found. Pref. the AAs in  
 CC the peptide do not exceed 50 residues, and they esp. contain 12-18  
 CC residues. The alkyl or alkenyl gp. pref. contains 12-24C and it is  
 CC pref. coupled to the terminal amino gp. of the residue opt. via a CO  
 CC gp. If a lipophilic substance is used, it is pref. palmitic, stearic,  
 CC behenic, oleic or mycolic acid.  
 CC (Updated on 25-MAR-2003 to correct PA field.)

XX Detecting expression of OB-cadherin or N-cadherin used for diagnosing  
XX and evaluating cancer -  
XX  
XX Disclosure; Page 19; 56pp; English.  
XX  
CC The present invention describes methods which have been developed for  
CC detecting and evaluating cancer that are based on the finding that  
CC OB-cadherin and N-cadherin are expressed by metastatic carcinoma cells,  
CC but not by highly differentiated, poorly invasive carcinomas. A method  
CC for determining the presence or absence of a cancer in a patient  
CC comprises: (1) contacting a biological sample from the patient with a  
CC binding agent that specifically binds to OB- or N-cadherin OR with an

CC oligonucleotide that hybridizes to a polynucleotide that encodes OB- or  
 CC N-cadherin; and (2) detecting in the sample an amount of polypeptide  
 CC that binds to the binding agent OR the amount of polynucleotide that  
 CC hybridizes to the oligonucleotide, relative to a predetermined cut-off  
 CC value, and determining the presence or absence of cancer in the patient  
 CC from this. The methods from the present invention can be used to  
 CC determine the metastatic potential of a cancer. The methods may be used  
 CC to detect a metastatic cancer in a patient, to monitor progression of a  
 CC cancer, or to evaluate the metastatic potential of a cancer. Cancers  
 CC which may be evaluated using the methods include leukemia, prostate  
 CC cancer, breast cancer and ovarian cancer. AAY73501 to AAY73813 represent  
 CC peptide sequences used in the exemplification of the present invention.  
 CC Specifically, AAY73503 to AAY73789 represent OB-cadherin cell adhesion  
 CC recognition (CAR) peptides and AAY73790 to AAY73808 represent N-cadherin  
 CC CAR peptides. AAY73906 to AAY74915 represent PCR primers used in examples  
 CC from the present invention.

XX New cadherin modulating agents, used for modulating nonclassical

PT cadherin-mediated functions for treating e.g. cancers, obesity,  
 PT rheumatoid arthritis, multiple sclerosis, diabetes or a neurological  
 PT disease

XX Claim 18; Page 159; 252pp; English.

XX The present invention describes cadherin modulating agents (MA)  
 CC comprising peptides which comprise a nonclassical cadherin cell adhesion  
 CC recognition (CAR) sequence. The MA can be used for modulating  
 CC nonclassical cadherin-mediated functions. They can be used for e.g.  
 CC inhibiting adhesion of nonclassical-cadherin expressing cells in a  
 CC mammal, enhancing delivery of a drug through the skin of a mammal,  
 CC mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in  
 CC a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting  
 CC angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-  
 CC expressing cell, preventing or treating obesity in a mammal, stimulating  
 CC blood vessel regression in a mammal, enhancing drug delivery to the  
 CC central nervous system, treating a demyelinating neurological disease,  
 CC increasing vasopermeability in a mammal, enhancing adhesion of  
 CC nonclassical cadherin-expressing cells, inhibiting synaptic stability in  
 CC a mammal, or preventing pregnancy in a mammal. They can also be used for  
 CC e.g. enhancing or directing neurite outgrowth, facilitating wound  
 CC healing or reducing scar tissue, or enhancing adhesion of foreign tissue  
 CC in a mammal. They can also be used for treating e.g. psoriasis,  
 CC arthritis, age-related macular degeneration, multiple sclerosis and  
 CC diabetes. The products can also be used for detection and diagnosis and  
 CC in bioreactors. AAY60592 to AAY64572 represent specifically claimed  
 CC peptides, and AAY64573 to AAY64643 and AAY33183 to AAY33186 represent  
 CC sequences used in the exemplification of the present invention.

PT Surface imprint composition for capturing, isolating, detecting,  
 PT analysing and/or quantifying molecules, comprises fraction of imprint  
 PT cavities that are localised at or near surface of matrix material -  
 XX  
 PS Example 10; Page 40; 63pp; English.  
 XX  
 CC The invention relates to molecular surface imprint compositions, useful  
 CC for detecting, analysing or quantifying molecules in a sample. A surface  
 CC imprint composition comprises a matrix material with an imprint cavity of  
 CC a template molecule. A substantial fraction of the imprint cavities are  
 CC localised at or near the surface of the matrix material. The matrix  
 CC material comprises one or more compounds that are capable of undergoing a  
 CC change in physical state, to produce a solid or semi-solid matrix that is  
 CC capable of retaining cavities corresponding in shape to the template  
 CC molecules. Surface imprints can also be used for isolating novel  
 CC molecules from complex mixtures and samples, for example, in expression  
 CC profiling and in the discovery of new molecules or novel members of known  
 CC classes of molecules. Surfacing imprinting provides improved binding  
 CC capacity and improved binding specificity. This sequence represents a  
 CC soybean trypsin inhibitor C-terminal peptide template molecule.

XX Variant enzyme having elevated nucleoside 5-prime phosphate producing  
 PT activity and having a specific three-dimensional structure for  
 PT production of nucleotides as pharmaceutical intermediates -  
 XX  
 PS Example 18; Fig 8D; 150pp; Japanese.

XX The present invention describes a variant nucleoside-5'-phosphate  
 CC producing enzyme which is a modification of a transphosphorylase or  
 CC phosphatase which contains a lysine, two arginine and two histidine  
 CC residues and in which the C-alpha distances between these residues are

CC enclosing a space which permits the binding of a nucleoside with these  
 CC residues. Also described are: (1) a gene encoding the variant enzyme;  
 CC (2) expression vectors containing the DNA; (3) host cells transformed  
 CC by the vectors; (4) preparation of the variant enzyme by culture of the  
 CC transformants; (5) crystals of the enzyme and of a complex of the enzyme  
 CC with molybdenic acid; and (6) selection of inhibitors of acid  
 CC phosphatase or transphosphorylase using the structural coordinates  
 CC derived from the enzyme. The variant enzymes with increased efficiency  
 CC for production of nucleoside 5-phosphates can be used as pharmaceutical  
 CC intermediates. AAH19701 to AAH19785 and AAB75064 to AAB75101 represent  
 CC sequences used in the exemplification of the present invention.

XX Modulating a biological function of an endothelial cell or  
 PT hematopoietic cell, useful for treating autoimmune diseases and  
 PT infectious diseases, by administering an antagonist that inhibits  
 PT binding between a PDZ protein and a PL protein -  
 XX  
 PS Disclosure; Page 87-94; 141pp; English.

XX The present invention relates to a new method for modulating a  
 CC biological function of an endothelial cell or hematopoietic cell. The  
 CC method involves introducing into a cell, an antagonist that inhibits  
 CC binding between a PDZ protein and a PL protein. The inhibitor is used  
 CC to treat a disease mediated by hematopoietic cells, e.g. autoimmune

PT an allergic response, or diseases mediated by immune system cells,  
 PT comprises introducing into the cell a PDZ-PL interaction enhancer or  
 PT inhibitor -  
 PS Disclosure; Page 95; 143pp; English.  
 XX  
 XX The present invention relates to a method for modulating a biological  
 CC function of an endothelial cell or haematopoietic cell, comprises  
 CC introducing into a cell an antagonist that inhibits binding between a  
 CC PDZ domain protein and a PL domain protein to result in inhibition of  
 CC leukocyte activation. The present sequence is a core sequence of a PL  
 CC domain protein (a T cell surface receptor). PDZ domains of proteins are  
 CC named after three prototypical proteins: PSD95, Drosophila large disc  
 CC protein and Zonula Occludin 1 protein. PDZ domain proteins are involved  
 CC in synapse formation by organising transmembrane neurotransmitter  
 CC receptors through intracellular interactions. The inhibitors identified  
 CC by the present invention can be used to treat a disease mediated by  
 CC haematopoietic cells, e.g. autoimmune disease, inflammation, allergy  
 CC (e.g. drug allergies), inflammatory bowel diseases, ulcerative colitis,  
 CC ileitis, psoriasis, respiratory allergic diseases (e.g. asthma), atopic  
 CC dermatitis, autoimmune diseases (e.g. rheumatoid arthritis, multiple  
 CC sclerosis, insulin-dependent diabetes, Hashimoto thyroiditis,  
 CC osteoarthritis), atherosclerosis, cancers, infectious diseases (e.g.  
 CC viral infection), ischaemia, vasculitis and Crohn's disease. The  
 CC inhibitors can also be used to prevent transplantation rejection of a  
 CC solid organ transplant.

XX Assays for determining the affinity of binding between a PDZ domain and  
 PT a ligand, and determining the Ki of an inhibitor of the binding,  
 PT comprises using a polypeptide comprising a PDZ domain and a non-PDZ  
 PT domain -

XX Disclosure; Page 117; 164pp; English.

XX The invention relates to methods and reagents for determining the  
 CC apparent affinity (Kd) of binding between a PDZ domain and a ligand. The  
 CC invention also relates to methods and reagents for determining the Ki of  
 CC an inhibitor of binding between a PDZ domain and a ligand, identifying an  
 CC agent that enhances binding of a PDZ domain and a ligand, and determining  
 CC the potency (K-enhancer) of binding between a PDZ domain and a ligand, by  
 CC determining the ligand bound with an immobilised polypeptide comprising a  
 CC PDZ domain and a non-PDZ domain on a surface. The modulator (preferably,  
 CC an inhibitor) of interaction between PDZ and PL is useful for treating a  
 CC disease characterised by leukocyte activation, e.g., an autoimmune  
 CC disease that is characterised by inflammatory or humoral immune response,  
 CC and for reducing inflammation in a subject. This sequence represents a T-  
 CC cell surface receptor C-terminal core peptide relating to the PDZ  
 CC containing proteins of the invention.

 DR Modulating the biological function of an endothelial cell or  
 PT hemopoietic cell e.g., a T-cell or B-cell comprises introducing into  
 PT the cell, an agent that inhibits binding of a PDZ protein and a PDZ  
 PT ligand protein in the cell  
 XX Disclosure; Page 135; 207pp; English.

XX The present invention describes a method (M1) for modulating a biological  
 CC function of an endothelial cell or haematopoietic cell. M1 comprises  
 CC introducing into the cell, an agent that inhibits binding of a PDZ  
 CC protein and a PDZ ligand (PL) protein in the cell, and so modulates the  
 CC biological function. Also described is a method (M2) for determining  
 CC whether a test compound is an inhibitor of binding between a PDZ protein  
 CC and a PL protein. M1 is used for modulating a biological function of an  
 CC endothelial cell or haematopoietic cell e.g., T-cell or B-cell, by an  
 CC inflammatory or humoral immune response, or an autoimmune disease. An  
 CC inhibitor (I1) is useful for treating a disease characterised by leukocyte  
 CC activation, where the disease is characterised by an inflammatory or

CC humoral immune response, e.g., an autoimmune disease. The compounds  
 CC e.g., PI-PDZ interaction inhibitors are useful for treating (ameliorating  
 CC symptoms of) a variety of diseases and conditions characterised by  
 CC inflammatory and humoral immune responses e.g., inflammation, allergy,  
 CC inflammatory bowel diseases, ulcerative colitis, ileitis and enteritis,  
 CC psoriasis and inflammatory dermatoses, scleroderma, respiratory allergic  
 CC diseases such as asthma, allergic rhinitis, corneal transplantation rejection  
 CC (cardiac, kidney, lung, liver, small bowel, trachea, pancreas, cadaver,  
 CC autologous, bone marrow, xenotransplantation), atherosclerosis, cancers,  
 CC angiogenesis-dependent disorders, infectious diseases and ischaemia.  
 CC ABQ96620 to ABQ96732 and ABP63153 to ABP63578 represent sequences used  
 CC in the exemplification of the present invention.

XX Diagnosing or evaluating metastatic potential of cancer in patient by  
 PT contacting biological sample obtained from patient with specified  
 PT binding agent or oligonucleotide, and detecting polypeptide that binds  
 PT to the binding agent

XX Disclosure; Page 7; 94pp; English.

XX The invention discloses a method for diagnosing or evaluating metastatic  
 CC potential of cancer in a patient. The method comprises contacting a  
 CC biological sample obtained from the patient with a binding agent,  
 CC preferentially antibodies or cell adhesion recognition (CAR) sequences,  
 CC that specifically bind to OB-cadherin or N-cadherin or an oligonucleotide  
 CC that hybridises to a polynucleotide encoding OB-cadherin or N-cadherin  
 CC and then detecting the amount of polypeptide that binds to the binding

CC agent. The inventive method is useful for diagnosing or evaluating  
 CC metastatic potential of cancer, such as prostate, ovarian or breast  
 CC cancer, as well as leukaemia in a patient. It can also be employed for  
 CC monitoring the progression of cancer in a patient. The inventive method  
 CC provides accurate diagnosis or evaluation of metastatic potential of  
 CC cancer in a patient in a simple and economical manner. The sequences  
 CC presented in ABU59970-ABU60210 are the OB-cadherin cyclic CAR sequences.

XX Novel cell adhesion modulating agent useful for e.g. modulating cell  
 PT adhesion of OB-cadherin-expressing cells and enhancing the delivery of  
 PT a drug to a tumour, comprises a native OB-cadherin cell adhesion  
 PT recognition sequence -

XX Disclosure; Column 3; 42pp; English.

XX The invention relates to a cell adhesion modulating agent comprising a  
 CC peptide four to nine amino acids in length that detectably inhibits  
 CC OB-cadherin mediated cell adhesion, consisting of a native OB-cadherin  
 CC cell adhesion recognition (CAR) sequence that comprises the sequence DDK  
 CC and optionally a residue on one or both sides of the CAR sequence to  
 CC facilitate cyclisation. The modulating agent is useful for modulating  
 CC cell adhesion of OB-cadherin-expressing cells and for enhancing the  
 CC delivery of a drug to a tumour or to the central nervous system in a  
 CC mammal. The agent is also useful for treating cancer and/or inhibiting  
 CC invasion and metastasis of a cancer. The agent is further useful for  
 CC stimulating blood vessel regression, for enhancing wound healing in a  
 CC mammal, for enhancing adhesion of foreign tissue implanted within a  
 CC mammal, for increasing vasopermeability in a mammal, for disrupting cell  
 CC adhesion mediated by multiple adhesion molecules, to facilitate cell  
 CC identification, sorting in vitro or imaging in vivo and for permitting  
 CC the selection of cells expressing OB-cadherin. This sequence represents

CC an OB-cadherin CAR sequence cyclic peptide analogue, used as a cell  
 CC adhesion modulating agent.

XX DR Detecting expression of OB-cadherin or N-cadherin used for diagnosing  
 XX PT and evaluating cancer -

XX PS Disclosure; Page 19; 56pp; English.

XX CC The present invention describes methods which have been developed for  
 CC detecting and evaluating cancer that are based on the finding that  
 CC OB-cadherin and N-cadherin are expressed by metastatic carcinoma cells,  
 CC but not by highly differentiated, poorly invasive carcinomas. A method  
 CC for determining the presence or absence of a cancer in a patient  
 CC comprises: (1) contacting a biological sample from the patient with a  
 CC binding agent that specifically binds to OB- or N-cadherin OR with an  
 CC oligonucleotide that hybridises to a polynucleotide that encodes OB- or  
 CC N-cadherin; and (2) detecting in the sample an amount of polypeptide  
 CC that binds to the binding agent OR the amount of polynucleotide that  
 CC hybridises to the oligonucleotide, relative to a predetermined cut-off

CC value, and determining the presence or absence of cancer in the patient  
 CC from this. The methods from the present invention can be used to  
 CC determine the metastatic potential of a cancer. The methods may be used  
 CC to detect a metastatic cancer in a patient, to monitor progression of a  
 CC cancer, or to evaluate the metastatic potential of a cancer. Cancers  
 CC which may be evaluated using the methods include leukemia, prostate  
 CC cancer, breast cancer and ovarian cancer. AAY73501 to AAY73813 represent  
 CC peptide sequences used in the exemplification of the present invention.  
 CC Specifically, AAY73503 to AAY73789 represent OB-cadherin cell adhesion  
 CC recognition (CAR) peptides and AAY73790 to AAY73808 represent N-cadherin  
 CC CAR peptides. AAY73906 to AAY73915 represent PCR primers used in examples  
 CC from the present invention.

XX CC New cadherin modulating agents, used for modulating nonclassical  
 XX cadherin-mediated functions for treating e.g. cancers, obesity,  
 XX rheumatoid arthritis, multiple sclerosis, diabetes or a neurological  
 XX disease -

PS Claim 18; Page 159; 252pp; English.

XX The present invention describes cadherin modulating agents (MA)

CC comprising peptides which comprise a nonclassical cadherin cell adhesion

CC recognition (CAR) sequence. The MAs can be used for modulating

CC nonclassical cadherin-mediated functions. They can be used for e.g.

CC inhibiting adhesion of nonclassical-cadherin expressing cells in a

CC mammal, enhancing delivery of a drug through the skin of a mammal,

CC enhancing delivery of a drug to a tumour in a mammal, treating cancer in

CC a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

CC angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

CC expressing cell, preventing or treating obesity in a mammal, stimulating

CC blood vessel regression in a mammal, enhancing drug delivery to the

CC central nervous system, treating a demyelinating neurological disease,

CC increasing vasopermeability in a mammal, enhancing adhesion of

CC nonclassical cadherin-expressing cells, inhibiting synaptic stability in

CC a mammal, or preventing pregnancy in a mammal. They can also be used for

CC e.g. enhancing or directing neurite outgrowth, facilitating wound

CC healing or reducing scar tissue, or enhancing adhesion of foreign tissue

CC in a mammal. They can also be used for treating e.g. psoriasis,

CC arthritis, age-related macular degeneration, multiple sclerosis and

CC diabetes. The products can also be used for detection and diagnosis and

CC in bioreactors. AAY60592 to AAY64572 represent specifically claimed

CC peptides, and AAY64573 to AAY64643 and AA233183 to AA233186 represent

CC sequences used in the exemplification of the present invention.

XX Vaccine compositions comprising human immunodeficiency virus-1 (HIV-1)

PT peptide groups, useful for vaccinating against HIV-1 -

XX

PS Claim 32; Page 164; 448pp; English.

CC The present invention describes a composition (I) comprising a prepared

CC human immunodeficiency virus-1 (HIV-1) group comprising an amino acid

CC sequence selected from 51 defined amino acid sequences (ABL25347 to

CC ABP23397). (I) has virucide activity and can be used in vaccines. (I)

CC may be used for immunising subjects against HIV-1 infections. The use of

CC group-based vaccines has several advantages over traditional vaccines,

CC particularly when compared to the use of whole antigens in vaccine

CC compositions. There is evidence that the immune response to whole

CC antigens is directed largely toward variable regions of the antigen,

CC allowing for immune escape due to mutations. The groups for inclusion in

CC an group-based vaccine may be selected from conserved regions of viral or

CC tumour-associated antigens, which therefore reduces the likelihood of

CC escape mutants. Furthermore, immunosuppressive groups that may be present

CC in whole antigens can be avoided with the use of group-based vaccines.

CC An additional advantage of an group-based vaccine approach is the ability

CC to combine selected groups (CTL and HTL), and further, to modify the

CC composition of the groups, achieving, for example, enhanced

CC immunogenicity. Accordingly, the immune response can be modulated, as

CC appropriate, for the target disease. Similar engineering of the response

CC is not possible with traditional approaches. ABP1501 to ABP25412

CC represent peptide sequences used in the exemplification of the present

CC invention.

XX Vaccine compositions comprising human immunodeficiency virus-1 (HIV-1)  
 PT peptide groups, useful for vaccinating against HIV-1 -

XX Claim 32; Page 287; 448pp; English.

XX The present invention describes a composition (I) comprising a prepared  
 CC human immunodeficiency virus-1 (HIV-1) group comprising an amino acid  
 CC sequence selected from 51 defined amino acid sequences (ABP25347 to  
 CC ABP25397). (I) has virucide activity and can be used in vaccines. (I)  
 CC may be used for immunising subjects against HIV-1 infections. The use of  
 CC group-based vaccines has several advantages over traditional vaccines,  
 CC particularly when compared to the use of whole antigens in vaccine  
 CC compositions. There is evidence that the immune response to whole  
 CC antigens is directed largely toward variable regions of the antigen,  
 CC allowing for immune escape due to mutations. The groups for inclusion in  
 CC an group-based vaccine may be selected from conserved regions of viral or  
 CC tumour-associated antigens, which therefore reduces the likelihood of  
 CC escape mutants. Furthermore, immunosuppressive groups that may be present  
 CC in whole antigens can be avoided with the use of group-based vaccines.  
 CC An additional advantage of an group-based vaccine approach is the ability  
 CC to combine selected groups (CTL and HTL), and further, to modify the  
 CC composition of the groups, achieving, for example, enhanced  
 CC immunogenicity. Accordingly, the immune response can be modulated, as  
 CC appropriate, for the target disease. Similar engineering of the response  
 CC is not possible with traditional approaches. ABP1501 to ABP25412  
 CC represent peptide sequences used in the exemplification of the present

CC invention.

DR Stabilized pharmaceutical containing N-terminal glutamic acid or  
PT glutamine, useful e.g. in anti-melanoma vaccines, is an addition salt  
PT with strong acid -  
XX  
PS Claim 9; Page 58; 149pp; French.  
XX  
CC The present invention describes a pharmaceutical compound (I) that  
CC contains an N-terminal glutamic acid (Glu) or glutamine (Gln) residue  
CC in the form of an addition salt with a strong, physiologically  
CC acceptable acid (II). Also described are: (a) a pharmaceutical  
CC composition containing at least one (I); (b) a vaccine containing at  
CC least one (I) where this is a major histocompatibility complex (MHC)  
CC ligand (Ia); (c) a method for in vitro diagnosis of diseases associated  
CC with the presence of (Ia); (d) a kit for method (c) that includes a (Ia);  
CC and (e) a process for preparing (I). (I) has immunomodulator, endocrine,  
CC antiallergic, neuroprotectant, virucidal, bactericidal, antiparasitic,  
CC fungicidal and cytostatic activities. (I) are useful, in human or  
CC veterinary medicine, in pharmaceutical compositions (for treating immune  
CC disorders, e.g. immune deficiency, autoimmune states, hypersensitivity,  
CC allergy, graft rejection, infection, hormonal disorders and central  
CC nervous system diseases), also, where (I) is a MHC ligand (Ia), in  
CC vaccines for treatment or prevention of: (i) viral, bacterial, parasitic  
CC or fungal infections; or (ii) of cancers. A particular application is in  
CC anti-melanoma vaccines. (I) are also useful for in vitro diagnosis of  
CC diseases associated with interactions between MHC and (I), e.g. melanoma  
CC and human immunodeficiency virus infection. AAM98898 to AAM99592  
CC represent peptides which can be used in pharmaceutical compounds from  
CC the present invention.

DR New hybrid polypeptide, useful for preventing, treating and diagnosing  
PT e.g. viral infections, comprises an enhancer peptide linked to a core  
PT polypeptide -  
XX  
PS Disclosure; Fig 2A; 151pp; English.  
XX  
CC The present sequence is an enhancer peptide which may be linked to  
CC a core polypeptide to form a novel hybrid polypeptide. The hybrid  
CC polypeptide exhibits enhanced pharmacokinetic properties relative to  
CC those exhibited by the core polypeptide when introduced into a living  
CC system. It is used to increase the in vitro or ex vivo half-life of  
CC the core polypeptide. The hybrid and core polypeptides can be used for  
CC modulating fusogenic events and intracellular processes involving  
CC coiled-coil peptide interactions. Other uses include preventing,  
CC treating and/or diagnosing disorders involving fusion events (e.g.  
CC modulation of neurotransmitter exchange and sperm-egg fusion),  
CC intracellular processes involving coiled-coil peptides (e.g. bacterial  
CC infections) and viral infections that involve cell-cell and/or  
CC virus-cell fusion (e.g. viral infections caused by human  
CC immunodeficiency virus, respiratory syncytial virus, Epstein-Barr  
CC virus, hepatitis B virus, Mason-Pfizer virus and polio virus).  
CC The enhancer peptide sequence increases the half-life and reduces the  
CC clearance rate of therapeutic peptides, which increases their efficacy  
CC and minimises the incidence and severity of adverse side effects.  
CC In addition, this increases the sensitivity of the diagnostic procedure  
CC in which they are used.

 PS Disclosure; Page 117; 164pp; English.  
 XX  
 CC The invention relates to methods and reagents for determining the  
 CC apparent affinity (Kd) of binding between a PDZ domain and a ligand. The  
 CC invention also relates to methods and reagents for determining the Ki of  
 CC an inhibitor of binding between a PDZ domain and a ligand, identifying an  
 CC agent that enhances binding of a PDZ domain and a ligand, and determining  
 CC the potency (K-enhancer) of binding between a PDZ domain and a ligand, by  
 CC determining the ligand bound with an immobilised polypeptide comprising a  
 CC PDZ domain and a non-PDZ domain on a surface. The modulator (preferably,  
 CC an inhibitor) of interaction between PDZ and PL is useful for treating a  
 CC disease characterised by leukocyte activation, e.g., an autoimmune  
 CC disease that is characterised by inflammatory or humoral immune response,  
 CC and for reducing inflammation in a subject. This sequence represents a T-  
 CC cell surface receptor C-terminal core peptide relating to the PDZ  
 CC containing proteins of the invention.

 XX Modulating the biological function of an endothelial cell or  
 PT haematopoietic cell e.g., a T-cell or B-cell comprises introducing into  
 PT the cell, an agent that inhibits binding of a PDZ protein and a PDZ  
 PT ligand protein in the cell -  
 XX  
 PS Disclosure; Page 135; 207pp; English.  
 XX  
 CC The present invention describes a method (M1) for modulating a biological  
 CC function of an endothelial cell or haematopoietic cell. M1 comprises  
 CC introducing into the cell, an agent that inhibits binding of a PDZ  
 CC (PSD95, Drosophila large disc protein, and Zonula Occludin 1 protein)  
 CC protein and a PDZ ligand (PL) protein in the cell, and so modulates the  
 CC biological function. Also described is a method (M2) for determining  
 CC whether a test compound is an inhibitor of binding between a PDZ protein  
 CC and a PL protein. M1 is used for modulating a biological function of an  
 CC endothelial cell or haematopoietic cell e.g., T-cell or B-cell, by an  
 CC inflammatory or humoral immune response, or an autoimmune disease. An  
 CC inhibitor (I) is useful for treating a disease characterised by leukocyte  
 CC activation, where the disease is characterised by an inflammatory or  
 CC humoral immune response, e.g., an autoimmune disease. The compounds  
 CC e.g., PL-PDZ interaction inhibitors are useful for treating (ameliorating  
 CC symptoms of) a variety of diseases and conditions characterised by  
 CC inflammatory and humoral immune responses e.g., inflammation, allergy,  
 CC inflammatory bowel diseases, ulcerative colitis, ileitis and enteritis,  
 CC psoriasis and inflammatory dermatoses, scleroderma, respiratory allergic  
 CC diseases such as asthma, allergic rhinitis, transplantation rejection  
 CC (cardiac, kidney, lung, liver, small bowel, cornea, pancreas, cadaver,  
 CC autologous, bone marrow, xenotransplantation), atherosclerosis, cancers,  
 CC angiogenesis-dependent disorders, infectious diseases and ischaemia.  
 CC ABQ96620 to ABQ96732 and ABP63153 to ABP63578 represent sequences used  
 CC in the exemplification of the present invention.

PT New fragments of neural adhesion molecule, useful for treating e.g.  
PT disorders of the central or peripheral nervous systems or heart muscle

PS Claim 17; Page 50; 108pp; English.

XX The present invention describes a compound (I) comprising at least one of  
CC the 3rd, 4th, and/or 5th immunoglobulin (Ig 3-5) modules and/or the 1st  
CC or 2nd fibronectin III modules (Fn3.1 or 3.2) of neural cell adhesion  
CC molecule (NCAM), or its fragments or variants, able to interact with a  
CC fibroblast growth factor (FGF) receptor, and/or adenosine triphosphate  
CC (ATP) and/or Li (a neural cell adhesion molecule). (I) can have cardiant,  
CC neurotropic, neuroprotective, antiparkinsonian, anticonvulsant, cytosstatic,  
CC antidiabetic, neuroleptic and nephrotropic activities. (I) stimulates  
CC signalling through the FGF receptor, and so modulates the proliferation,  
CC differentiation, regeneration, neural plasticity and/or survival of cells  
CC that express the FGF receptor. (I), optionally used in combination with a  
CC proshesis (nerve guide) can be used for treating diseases of the central  
CC and peripheral nervous systems, e.g. nerve damage, post-ischaemic damage,  
CC multiple sclerosis, diabetic nerve degeneration, Alzheimer's, Parkinson's  
CC and Huntington's diseases, treating diseases of muscles, e.g. impaired  
CC neuro-muscular connections, diabetes types I and II, degeneration of  
CC kidney or pancreas, preventing death of heart muscle cells, e.g. after  
CC acute myocardial infarct, and for revascularisation, promotion of wound  
CC healing, inhibition of angiogenesis, treatment of cancers (where these  
CC express NCAM ligands), to stimulate memory and learning and to modulate  
CC the proliferation, differentiation, regeneration, neural plasticity  
CC and/or survival of cells. (I) can also be used to identify motifs in  
CC peptide ligands expected to bind to the fibroblast growth factor receptor  
CC and/or ATP. ABR48249 to ABR48452 represent peptides which can be used in  
CC a compound from the present invention.

DR Diagnosing or evaluating metastatic potential of cancer in patient by

XX contacting biological sample obtained from patient with specified  
 PT binding agent or oligonucleotide, and detecting polypeptide that binds  
 PT to the binding agent -

XX Disclosure; Page 7; 94pp; English.

XX The invention discloses a method for diagnosing or evaluating metastatic  
 CC potential of cancer in a patient. The method comprises contacting a  
 CC biological sample obtained from the patient with a binding agent,  
 CC preferentially antibodies or cell adhesion recognition (CAR) sequences,  
 CC that specifically bind to OB-cadherin or N-cadherin or an oligonucleotide  
 CC that hybridises to a polynucleotide encoding OB-cadherin or N-cadherin

CC and then detecting the amount of polypeptide that binds to the binding  
 CC agent. The inventive method is useful for diagnosing or evaluating  
 CC metastatic potential of cancer, such as prostate, ovarian or breast  
 CC cancer, as well as leukaemia in a patient. It can also be employed for  
 CC monitoring the progression of cancer in a patient. The inventive method  
 CC provides accurate diagnosis or evaluation of metastatic potential of  
 CC cancer in a patient in a simple and economical manner. The sequences  
 CC presented in ABUS59970-ABU60210 are the OB-cadherin cyclic CAR sequences.

XX Novel cell adhesion modulating agent useful for e.g. modulating cell

PT adhesion of OB-cadherin-expressing cells and enhancing the delivery of  
 PT a drug to a tumour, comprises a native OB-cadherin cell adhesion  
 PT recognition sequence -

XX Disclosure; Column 3; 42pp; English.

XX The invention relates to a cell adhesion modulating agent comprising a  
 CC peptide four to nine amino acids in length that detectably inhibits  
 CC OB-cadherin mediated cell adhesion, consisting of a native OB-cadherin  
 CC cell adhesion recognition (CAR) sequence that comprises the sequence DDK  
 CC and optionally a residue on one or both sides of the CAR sequence to  
 CC facilitate cyclisation. The modulating agent is useful for modulating  
 CC cell adhesion of OB-cadherin-expressing cells and for enhancing the  
 CC delivery of a drug to a tumour or to the central nervous system in a  
 CC mammal. The agent is also useful for treating cancer and/or inhibiting  
 CC invasion and metastasis of a cancer. The agent is further useful for  
 CC stimulating blood vessel regression, for enhancing wound healing in a  
 CC mammal, for increasing adhesion of foreign tissue implanted within a  
 CC mammal, for increasing vasopermeability in a mammal, for disrupting cell  
 CC adhesion mediated by multiple adhesion molecules, to facilitate cell  
 CC identification, sorting in vitro or imaging in vivo and for permitting

CC the selection of cells expressing OB-cadherin. This sequence represents  
 CC an OB-cadherin CAR sequence cyclic peptide analogue, used as a cell  
 CC adhesion modulating agent.

XX Identifying signal oligopeptide(s) in protein sequence(s) - shown as  
 PT regions of max. hydrophilicity, used in modulating communication  
 PT between protein(s)

XX Claim 5; Page 44; 88pp; English.

XX The sequences given in AAW21301-560 represent hydrophilic signal oligo-  
 CC peptides. These signal oligopeptides are localised on the surface  
 CC of the protein and are represented by the hydrophilicity maxima of  
 CC the protein. These peptides are enriched in charged amino acids  
 CC arranged with neutral spacer amino acids. The specific signal  
 CC character of these oligopeptides is determined by a characteristic  
 CC combination of conformation and charge within the signal sequence.  
 CC These oligopeptides may be used as vaccines in the treatment of  
 CC human disease, as competitive inhibitors to prevent or reduce the  
 CC metabolic action or interaction of a selected protein by blocking  
 CC its specific signal sequences, or as therapeutic agents to function  
 CC as feedback regulators to reduce synthesis rate of a selected protein.  
 CC These peptides may be modified by omitting one or more amino acids at  
 CC the N- and/or C-terminal, by substituting one or more amino acids

CC without consideration of charge and polarity, by substituting one or  
 CC more amino acids with amino acid residues with similar charge and/or  
 CC polarity, by omitting one or more amino acids or a combination of these.

 PT increasing spinal axon out-growth or directing axon orientation

XX Disclosure; Page 4; 58pp; English.

XX The peptides given in AAR74189-200 and AAR76042-58 have axon outgrowth  
 CC and/or orienting activity and are based on domain V, domain VI  
 CC or the C-terminal domains of chick p78 and p75 (AAR74186-87).

XX
XX New nucleic acid encoding the cancer-associated polypeptide plu-1, for
PT diagnosis, treatment and prevention of cancer, especially of breast and
PT ovary.
XX
XX Example 2; Fig 12; 173pp; English.
PS
XX
XX The invention relates to a human cancer-associated polypeptide plu-1.
CC The plu-1 polypeptide can be recombinantly expressed by standard
CC recombinant methodology. Detection of the plu-1 nucleic acid or the
CC polypeptide is used for the following: (i) diagnosis (including imaging)
CC and prognosis of, and determination of susceptibility to, cancer,
CC specifically ovarian or breast cancer; and (ii) treating cancer (by
CC inducing an immune response against cancer cells, e.g. as a vaccine, or
CC by antisense inhibition). Antigens derived from the polypeptide are used
CC to generate activated cytotoxic T lymphocytes, or dendritic cells, for
CC subsequent return to the patient for treatment of cancer. The polypeptide
CC may also be used to identify inhibitors of plu-1 activity. Fragments of
CC the polypeptide, and antibodies raised against plu-1, are useful as assay
CC and imaging agents, also therapeutically (to induce an anti-idiotype
CC response or where conjugated to cytotoxic agents). The plu-1 antigen is
CC expressed more commonly in breast tumors than some known tumor antigens.
CC Sequences AAY5320-629 represent predicted peptides from the plu-1
CC polypeptide which may bind to the human class I alleles B27, A2, A3 and
CC A11.

DR
XX
XX Synthesizing heat shock protein complexes using a denatured protein
PT matrix
PT
XX
XX Example 1; Fig 1C; 33pp; English.
PS
XX
XX This invention describes a novel method for synthesizing heat shock
CC protein (HSP) complexes comprising adding a heat shock protein to a
CC denatured protein matrix for binding, and adding a complexing solution
CC comprising a peptide to elute a heat shock protein-peptide complex. A
CC HSP-antigen complex is useful as a vaccine for treating an allergic
CC disease (in a mammal, preferably a human) to reduce susceptibility of
CC the Th2 response, the complex comprising a HSP-antigenic peptide complex.
CC The complex is administered to prevent a mammal from having an allergic
CC reaction to an allergic disease, or administered to a mammal having an
CC allergic disease, to reduce the allergic reactions. Allergic diseases
CC include asthma and skin rashes. Prior art methods or preventing/treating
CC allergic diseases include antihistamines which treat only the symptoms,
CC corticosteroids which have severe side effects and desensitization
CC therapy which has limited uses. The new method also allows more
CC flexibility of use of peptide-based vaccines, as prior art HSP-based
CC vaccines require isolation from a portion of the tumour itself. This
CC sequence represents a peptide fragment derived from the HIV gag protein
CC which is used in the method of the invention.

PT Measuring different enzyme activities simultaneously by contacting with  
PT a binding domain and a binding partner having a site  
PT post-translationally modifiable by the enzyme and measuring interaction  
PT between them -  
XX  
PS Disclosure; Page 37; 78pp; English.  
XX  
XX The present sequence is the N-myristoylation/palmitoylation site from Fyn  
CC protein. This site may be used in the method of the present invention, in  
CC which, the activity of two enzymes may be measured simultaneously via  
CC contacting the enzymes separately with a binding domain and a binding  
CC partner. The binding domain and binding partner comprise a site subject  
CC to post-translational modification by the enzyme under investigation e.g.  
CC an enzyme involved in N-myristoylation. Modification of the site by the  
CC enzyme affects the interaction between the binding domain and the binding  
CC partner and so this interaction may be measured in order to measure the  
CC enzyme activity. The present sequence may be used as a binding domain or  
CC partner in the method of the present invention.

Title: US-09-641-801-11

Perfect score: 3

Sequence: 1 DKE 3

Scoring table: OLIGO

Gapop 60.0 , Gapext 60.0

Searched: 127863 seqs, 47026705 residues

Word size : 0

Total number of hits satisfying chosen parameters: 1220

Minimum DB seq length: 3

Maximum DB seq length: 20

Post-processing: Listing first 100 summaries

Database : SwissProt\_41.\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

 XX  
 CC Sequences AAB72246 - AAB72275 represent peptides derived from colostrinin,  
 CC a proline rich polypeptide aggregate contained in colostrinum. The  
 CC peptides have immune response modulatory activity, and are capable of  
 CC inducing cytokines. Colostrinin and its derived peptides are useful for  
 CC inducing cytokine production, for modulating an immunological response  
 CC and for inducing blood cell proliferation. The peptides are useful in the  
 CC treatment of disorders of the central nervous system, neurological  
 CC disorders, mental disorders, dementia, neurodegenerative diseases,  
 CC Alzheimer's disease, motor neurone disease, psychosis, neurosis, chronic  
 CC disorders of the immune system, bacterial and viral infections and  
 CC acquired immunological deficiencies.

 XX Modulating oxidative stress level in a cell, involves contacting the  
 PT cell with an oxidative stress regulator selected from colostrinin, its  
 PT constituent peptide, analog or their combinations -  
 XX  
 PS Claim 6; Page 25; 48pp; English.  
 XX  
 CC The present invention relates to a method for modulating the oxidative  
 CC stress level in a cell or a patient, comprising contacting the cell with,  
 CC or administering to the patient, an oxidative stress regulator selected  
 CC from colostrinin, or its constituent peptide (e.g. the present peptide),  
 CC to change the level of an oxidising species in the cell. The method can  
 CC be used to treat oxidative damage to skin, by decreasing or preventing an  
 CC increase in the level of damage to a biomolecule of the patient.

 PT Composition useful for the modulation of blood cell proliferation in a  
 PT patient comprises a blood cell regulator selected from colostrinin, its  
 PT constituent peptide and/or analog -  
 XX  
 PS Claim 6; Page 25; 51pp; English.  
 XX  
 CC The invention relates to a composition which comprises a blood cell  
 CC regulator selected from colostrinin, its constituent peptide and/or  
 CC analogue. The invention is used for modulating the oxidative stress  
 CC level in a cell e.g. mammalian or human cell present in a cell culture,  
 CC tissue, organ, or organism; or for treating oxidative damage to the skin  
 CC of a patient e.g. animal or human; to modulate oxidative stress during/

CC after a premature birth or normal birth, preventing/delaying aging in a  
 CC patient, enhancing wound healing, and the reduction of side effects of  
 CC cosmetic procedures. The method changes the level of an oxidizing species  
 CC in the cell, such as decreases or prevents increase in the level of  
 CC damage to a biomolecule of the patient selected from DNA, protein and/or  
 CC lipid, compared to the same conditions when the oxidative stress  
 CC regulator is not present. The modulation of oxidative stress results in  
 CC enhanced repair, regeneration, and replacement of cells, tissues and  
 CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
 CC external organs), as well as enhanced preservation of such organs for  
 CC transplantation, implantation, or scientific research. The present  
 CC sequence is a colostrinin constituent peptide.

XX PT Modulation of blood cell proliferation in a patient involves use of  
 PT blood cell regulator selected from colostrinin, its constituent peptide  
 PT and/or analogue

XX PS Claim 1; Page 34; 54pp; English.

XX CC The present sequence is that of a colostrinin constituent peptide  
 CC that is used as an immunological regulator and as a blood cell  
 CC regulator in claimed methods of the invention. The peptide is  
 CC classified as having a beta-casein homologue precursor. Methods  
 CC are claimed for: inducing a cytokine in a cell by contact with an  
 CC immunological regulator, where the cell is present in a cell  
 CC culture, a tissue, an organ or an organism, and the cell is  
 CC mammalian, including human; modulating an immune response in a cell  
 CC by contact with the immunological regulator under conditions

CC effective to induce a cytokine; modulating an immune response in a  
 CC patient by administering an immunological regulator under conditions  
 CC effective to induce a cytokine, where the immunological regulator  
 CC is administered topically or as part of a dietary supplement, and  
 CC where the immune response is specific or non specific, an interferon  
 CC response or an antibody response; modulating blood cell proliferation  
 CC by contacting blood cells with a blood cell regulator, where the  
 CC blood cells are present in a cell culture or an organism, are  
 CC mammalian or human, and where the blood cells are increased in  
 CC number or differentiated; and a method for modulating blood cell  
 CC proliferation in a patient. A claimed cytokine-inducing composition  
 CC comprises a pharmaceutical carrier and an active agent such as the  
 CC present peptide.

XX PT Promoting cell differentiation in a patient involves use of blood cell  
 PT regulator selected from colostrinin, its constituent peptide and/or  
 PT analog

XX PS Claim 7; Page 21; 37pp; English.

XX CC The invention comprises a method for promoting cell differentiation (e.g.  
 CC neural cell differentiation). The method involves contacting cells with a  
 CC neural cell regulator (i.e. a colostrinin peptide) in order to change the  
 CC cells in morphology to form neural cells. Colostrinin is a proline-rich  
 CC polypeptide aggregate that is present in colostrum. The method of the  
 CC invention is useful for promoting the differentiation of cells and for  
 CC treating damaged neural cells in a patient. The present amino acid  
 CC sequence represents a specifically claimed colostrinin peptide used in

CC the method of the invention.

PT and immune system, viral and bacterial infections, and diseases  
PT characterized by amyloid plaques -

XX Claim 8; Page 27; 63pp; English.

XX The present invention provides the sequences of a number of peptides  
CC found in ewe's colostrin. Colostrin is the proline-rich polypeptide  
CC fragment of colostrum. These peptides can be used in the treatment of  
CC central nervous system disorders such as senile dementia, Parkinson's  
CC disease, Alzheimer's disease, psychosis and neurosis, immune system  
CC disorders such as bacterial and viral infections, to improve the  
CC development of a child's immune system, as a dietary supplement, and to  
CC promote the dissolution of beta-amyloid plaques.

XX Detection of modulators of Mena and Ena-VASP-like genes and proteins  
PT - used in control of cytoskeletal dynamic events in normal and  
PT abnormal cell morphology, adhesion, motility, growth and  
PT differentiation

XX Example 7; Page 44; 77pp; English.

XX This peptide motif is found in zyxin, vinculin and other focal  
CC adhesion proteins containing an ActA-like motif. The N-terminal  
CC portion of novel murine Mena (mammalian Ena) protein (see AAW37148)  
CC contains an Ena-VASP homology domain (EVH1) that directs the proper  
CC localisation of Mena to focal contacts via directed protein-protein  
CC interactions with zyxin, vinculin etc. This suggests that the  
CC FPPPP motif may comprise the core recognition site in EVH1 ligands.  
CC Based on the disclosed Mena and Evi genes (see AAV02996-98) and  
CC proteins (see AAW37148-53), a variety of methods and compositions are  
CC provided for screening, isolating and characterising endogenous and  
CC exogenous factors, drugs and therapeutic agents useful to evaluate  
CC and/or control cytoskeletal dynamic events involved in normal and  
CC abnormal cell morphology, adhesion, motility, growth and/or  
CC differentiation.

 XX Modulating cytoskeletal rearrangement to regulate T cell and macrophage  
 PT activation for treating cancer, autoimmune disease, and infectious  
 PT disease, comprises contacting with a Fyb/SLAP complex modulator -  
 XX  
 XX Claim 4; Page 56; 79pp; English.  
 PS  
 XX The present sequence represents a Fyb/SLAP complex inhibitor. Fyb/SLAP  
 CC proteins are ligands for the EVH1 domains of  
 CC Ena(enabled)/vasodilator-stimulated phosphoprotein (VASP) proteins. The  
 CC specification describes a method for modulating cytoskeletal  
 CC rearrangement in a cell, or T cell response to T cell receptor  
 CC stimulation. The method comprises contacting the cell or T cell with  
 CC a Fyb/SLAP complex modulator sufficient to modulate the formation  
 CC of a complex of an Ena/VASP protein and a Fyb/SLAP protein. The  
 CC method is useful for modulating cytoskeletal rearrangement in a cell  
 CC such as a lymphocyte, preferably a T cell, a macrophage or a cell  
 CC fragment such as a platelet and for modulating T cell response to a  
 CC T cell receptor stimulation. T cell response is increased in a subject  
 CC having or at risk of developing infectious disease or cancer and T cell  
 CC response is inhibited in a subject having or is at risk of developing an  
 CC autoimmune disease or a condition characterized by inflammation. A  
 CC composition comprising a Fyb/SLAP complex inhibitor is useful for  
 CC increasing platelet aggregation for promoting wound healing or  
 CC clotting.

 XX  
 XX Regulating cell motility for promoting wound healing and tissue  
 PT regeneration, treating, neurodegenerative disease and metastasis, by  
 PT inducing or depleting a functional enabled/vasodilator-stimulated  
 PT phosphoprotein -  
 XX  
 XX Example 2; Page 60; 107pp; English.  
 PS  
 XX  
 XX The invention relates to a method of preventing mammalian cell migration,  
 CC comprising inducing a functional Ena(enabled)/vasodilator-stimulated  
 CC phosphoprotein (VASP) or promoting cell migration comprising depleting  
 CC functional Ena/VASP protein in the mammalian cell. The method is useful  
 CC for preventing or promoting mammalian cell migration, preferably tumour  
 CC cell migration in vitro or in vivo and to prevent tumour cell metastasis  
 CC in a subject. An Ena/VASP activator or inhibitor is useful for promoting  
 CC wound healing, preferably fibroblasts or nerve cells of a tissue type  
 CC with the inhibitor to promote actin polymerisation and tissue formation  
 CC on a scaffold. The inhibitor is also useful for preventing  
 CC neurodegeneration such as in Alzheimer's disease, Down Syndrome,  
 CC Parkinson's disease, amyotrophic lateral sclerosis (ALS), stroke, direct  
 CC trauma, Huntington's disease, epilepsy, ALS-Parkinsonism-dementia  
 CC complex, progressive supranuclear palsy, progressive bulbar palsy,  
 CC spinomuscular atrophy, cerebral amyloidosis, Pick's atrophy, Retts  
 CC cerebellar degeneration, Tourettes syndrome, hypoglycaemia, hypoxia,  
 CC Creutzfeldt-Jakob disease and Korsakoff's syndrome. The Ena/VASP  
 CC inhibitor is further useful for enhancing learning and memory in a  
 CC subject having or at risk of developing a learning disorder such as  
 CC Alzheimer's disease, Creutzfeldt-Jakob disease, brain damage, senile  
 CC dementia, Korsakow's disorder and age-related memory loss. The inhibitor  
 CC is administered in an amount for inhibiting the activity of Mena in a  
 CC synapse. Ena/VASP activator is useful for disrupting learning and memory  
 CC and the activator is administered in an amount to promote Ena/VASP  
 CC protein-FE65 interaction. Inducing the activity of Ena/VASP protein  
 CC in immune or haematopoietic cells reduces the ability of the cells to  
 CC migrate and this is useful for treating and preventing inflammatory  
 CC disorders such as arthritis, allergy, gout, organ transplant,  
 CC ulcerative colitis and ischaemic diseases and also for treating cancer  
 CC metastasis. The present sequence represents the amino acid sequence  
 CC of Ena/VASP homology (EVH) proline-rich motif #1.

 XX  
 PS Example 1; Page 24; 55pp; English.  
 XX  
 CC AAW31412-W31459, AAW31461-W31481, AAW31483-W31493 and AAW39053-W39076  
 CC are fragments used in an assay to determine novel transcriptional  
 CC activators. The method involves the production of transcriptional  
 CC activators comprising of a DNA-binding group and a 6-25 amino acid  
 CC peptide that is covalently bonded to the DNA binding group and does not  
 CC represent a fragment of a natural transcription activator.  
 CC Protein-protein interactions are identified in the assay by fusing a  
 CC DNA-binding domain to a library of DNA fragments and introducing this and  
 CC a fusion of target protein and a polypeptide containing a region of Gal4  
 CC which interacts with Gal4p into a cell containing Gal4p and identifying  
 CC members of the library that interact with the target for activation of  
 CC transcription. Such constructs are used to activate transcription in a  
 CC cell, e.g. for controlling gene activity, particularly in gene therapy  
 CC (e.g. recognizing a site close to a selected therapeutic gene).  
 CC Transcription can be activated without blocking other transcriptional  
 CC activators. They probably act by interacting with a component of the RNA  
 CC polymerase II holoenzyme, Gal4, the strongest known yeast activator,  
 CC which provides a more sensitive assay allowing detection of even weak  
 CC protein-protein interactions. Such activators do not create toxicity  
 CC problems even when overexpressed.

XX New polypeptide containing a Vpr-binding region -  
 PT Claim 16; Fig 5; 69pp; English.  
 XX This sequence represents a heptapeptide (SEQ ID 17) which can bind

CC lentiviral Vpr protein. Such peptides were identified from a phage  
 CC display library via screening for Vpr-binding activity. Vpr is a human  
 CC immunodeficiency virus type 1 (HIV-1) protein (also found in other  
 CC primate lentiviruses) which is packaged into virions in equal quantities  
 CC to the gag protein. Vpr is expressed relatively late in the lentiviral  
 CC life cycle and encodes a 14 kb protein which is predominantly localised  
 CC in the nucleus of an infected cell. Vpr is able to associate with the  
 CC major uracil DNA glycosylase (UDG) involved in cellular DNA repair, which  
 CC prevents misincorporation of deoxyuracil into DNA during DNA synthesis.  
 CC The association of Vpr with UDG may allow incorporation of UDG into  
 CC HIV-1 virions, resulting in a reduction of uracil misincorporation in  
 CC viral RNA-derived DNA during a subsequent infection cycle. Vpr-binding  
 CC peptides can be fused to polypeptides which do not normally contain a  
 CC Vpr-binding region, rendering the polypeptides susceptible to uptake  
 CC into a virion. Such Vpr-binding polypeptides may be useful for inhibiting  
 CC replication of a virus in a human cell, and for determining whether other  
 CC polypeptides contain a Vpr-binding region. The invention removes the  
 CC requirement to use chimeric proteins containing a portion of the Vpr  
 CC protein to incorporate a protein into a virion, thus avoiding problems  
 CC such as cell cycle arrest, apoptosis or reactivation of a latent  
 CC retrovirus.

XX New linear epitope(s) for human auto-antibodies - from the

PT Ro/SSA, La/SSB and Sm B/B' antigens and ribonucleoprotein, used  
 PT for diagnosing and treating auto-immune disorders e.g. systemic  
 PT lupus erythematosus

XX Claim 1; Page 31; 43pp; English.

XX The sequences given in AAR43391-562 are linear epitopes which are  
 CC derived from the 60 kD Ro/SSA peptide, the La/SSB autoantigen,  
 CC the 70 kD nuclear ribonucleoprotein (nRNP) and the Sm B/B'  
 CC polypeptide. These antigens are common in systemic lupus  
 CC erythematosus (SLE) and closely related disorders. The Ro/SSA family  
 CC of proteins has been shown to have several molecular forms which are  
 CC defined by the molecular weight of the antigen identified. The major  
 CC form has a molecular weight of 60 kD and two additional forms have  
 CC molecular weights of 52 and 54 kD. La/SSB is also a member of this  
 CC group of autoantibodies and binds small RNAs with a pyrimidine  
 CC terminus. La/SSB is bound by a third of the anti-Ro/SSA precipitin  
 CC positive sera. La/SSB has been shown to be a 46-50 kD monomeric  
 CC phosphoprotein which associates with RNA polymerase III transcripts.  
 CC Anti-Sm antibodies precipitate snRNPs containing the U1, U2, U4/U6 and

CC U5 RNA. Anti-Sm antibodies may be directed against one or a  
 CC combination of the polypeptides: B (26 kD), B' (27 kD), D (13 kD),  
 CC E/F (11 kD doublet) and G (less than 10 kD). These epitopes may be  
 CC used for preventing, treating or screening autoimmune disorders,  
 CC especially SLE or Sjogrens syndrome (SS). They bind to a human  
 CC autoantibody and may therefore be used as vaccines.  
 CC (Updated on 25-MAR-2003 to correct PN field.)

XX B cell clonal toxin useful for treating autoimmune disorders such as

XX Grave's disease, myocardial infarction, Crohn's disease, multiple

XX sclerosis, comprises a group that causes toxin to be internalized by B

XX cell -

XX Disclosure; Page 31; 46pp; English.

XX This invention relates to a B cell clonal toxin. The toxin is made from

XX two moieties, the first causes the toxin to be internalized by a B cell,

XX and the second is a biologically acceptable toxin. The invention

XX includes a method for inactivating/killing an antigen specific B cell. A

XX target B cell is contacted with an effective amount of a B cell clonal

XX toxin. The method is useful for selective immunosuppression in conditions

XX characterized by the presence of an unwanted or deleterious immune

XX response, e.g. in the treatment of antigen specific antibody mediated

XX disease conditions. Use of the B cell clonal toxin can result in

XX immunosuppressive; antiinflammatory; antiallergic; virucide;

CC antidiabetic; thyromimetic; antithyroid; vasotropic; cardiant; antiulcer;  
 CC neuroprotective; antirheumatic; antiarthritic; dermatological;  
 CC ophthalmological; and nephrotropic activity. The toxin is particularly  
 CC useful for treating a host suffering from an antigen specific antibody  
 CC mediated disease condition, where the antigen specific antibody is  
 CC produced by an antigen-reactive B cell population present in a host. The  
 CC toxin is useful for treating allergies, viral disease conditions, and  
 CC autoimmune disorders. Also treated are skin diseases; autoimmune  
 CC endocrinopathies; vasculitic syndromes; cardiovascular disease;  
 CC immunohaematologic disorders; gastrointestinal diseases; neurologic  
 CC diseases; collagen vascular diseases; renal diseases; pulmonary diseases;  
 CC and infertility disorders. The present sequence represents a U3 RNP  
 CC epitope. An antibody response to this antigen is implicated in mixed  
 CC connective tissue disorders, which may be treated using the toxin of the  
 CC invention.

XX XX

XX PT Regulating cell motility for promoting wound healing and tissue

XX PT regeneration, treating, neurodegenerative disease and metastasis, by

XX PT inducing or depleting a functional enabled/vasodilator-stimulated

XX PT phosphoprotein -

XX XX

XX PS Example 6; Page 66; 107pp; English.

XX XX

XX CC The invention relates to a method of preventing mammalian cell migration,

XX CC comprising inducing a functional Ena(enabled)/vasodilator-stimulated

XX CC phosphoprotein (VASP) or promoting cell migration comprising depleting

XX CC functional Ena/VASP protein in the mammalian cell. The method is useful

XX CC for preventing or promoting mammalian cell migration, preferably tumour

XX CC cell migration in vitro or in vivo and to prevent tumour cell metastasis

XX CC in a subject. An Ena/VASP activator or inhibitor is useful for promoting

XX CC wound healing, preferably fibroblasts or nerve cells of a tissue type

XX CC with the inhibitor to promote actin polymerisation and tissue formation

XX CC on a scaffold. The inhibitor is also useful for preventing

XX CC

CC neurodegeneration such as in Alzheimer's disease, Down Syndrome,  
 CC Parkinson's disease, amyotrophic lateral sclerosis (ALS), stroke, direct  
 CC trauma, Huntington's disease, epilepsy, ALS-Parkinsonism-dementia  
 CC complex, progressive supranuclear palsy, progressive bulbar palsy,  
 CC spinocerebellar atrophy, cerebellar amyloidosis, Pick's atrophy, Rett's  
 CC cerebellar degeneration, Tourette's syndrome, hypoglycaemia, hypoxia,  
 CC Creutzfeldt-Jakob disease and Korsakoff's syndrome. The Ena/VASP  
 CC inhibitor is further useful for enhancing learning and memory in a  
 CC subject having or at risk of developing a learning disorder such as  
 CC Alzheimer's disease, Creutzfeldt-Jakob disease, brain damage, senile  
 CC dementia, Korsakow's disorder and age-related memory loss. The inhibitor  
 CC is administered in an amount for inhibiting the activity of Mena in a  
 CC synapse. Ena/VASP activator is useful for disrupting learning and memory  
 CC and the activator is administered in an amount to promote Ena/VASP  
 CC protein-PE65 interaction. Inducing the activity of Ena/VASP protein  
 CC in immune or haematopoietic cells reduces the ability of the cells to  
 CC migrate and this is useful for treating and preventing inflammatory  
 CC disorders such as arthritis, allergy, gout, organ transplant,  
 CC ulcerative colitis and ischaemic diseases and also for treating cancer  
 CC metastasis. The present sequence represents the amino acid sequence  
 CC of Ena/VASP homology (EVH) proline-rich motif #3.

XX Artificial antigen presenting cells for activating T lymphocytes,  
 PT comprises eukaryotic cell expressing antigen presenting complex having  
 PT beta2-microglobulin, exogenous accessory molecule, human leukocyte  
 PT antigen molecule and protein -

XX Disclosure; Page 4; 75pp; English.

XX The present invention relates to an artificial antigen presenting cell  
 CC (AAPC) comprising a eukaryotic cell expressing an antigen presenting  
 CC complex comprising beta2-microglobulin, an exogenous accessory molecule,  
 CC a human leukocyte antigen, HLA (major histocompatibility complex, MHC),  
 CC molecule of a single type and a protein that is processed intracellularly  
 CC to produce an exogenous T cell-specific epitope. The invention also  
 CC relates to methods for activation of T lymphocytes. The method is also  
 CC useful for identifying within a test population of cytotoxic T

CC lymphocytes (CTLs), CTLs specifically activated against a known T-cell  
 CC specific antigen (TCA), which is useful for diagnostic purposes. AAPC is  
 CC also useful for activating CTLs, by contacting AAPC with a suitable  
 CC population of T lymphocytes under conditions suitable for the activation  
 CC and isolating the activated CTLs. AAPC is further useful for the  
 CC investigation of primary T cell activation and diagnostic applications  
 CC here primary T cell activation allow discovery of antigens and accessory  
 CC molecules, and diagnostic applications include cell-based assays for  
 CC quantifying immune response in normal, infected or treated (vaccinated)  
 CC patients. Composition comprising AAPC or activated T cells produced by  
 CC utilising AAPC is useful for eliciting an antitumour response. The  
 CC invention is used for the treatment of cancer. The present sequence is  
 CC human HLA-B7 Ribo'al S26 peptide.

XX Identifying peptides that are capable of binding to major  
 PT histocompatibility complex (MHC) molecules of a particular haplotype by  
 PT analyzing peptides bound to the soluble and secreted form of the MHC  
 PT molecules of the particular haplotype -

XX Claim 51; Page 211; 238pp; English.

XX The invention relates to a novel method for identifying peptides  
 CC originating from a particular cell type, which are capable of binding to  
 CC major histocompatibility complex (MHC) molecules of a particular  
 CC haplotype. The method comprises analysing peptides bound to the soluble  
 CC and secreted form of the MHC molecules of the particular haplotype. The  
 CC method is useful for identifying peptides for treating an autoimmune  
 CC disease, such as T or B cell and/or allergic disease or condition,  
 CC rheumatoid arthritis, or multiple sclerosis, neurodegenerative disorders,

CC e.g. Alzheimer's disease, or diseases associated with inflammation. The  
CC sequences of the invention may be used in a gene therapy application.  
CC -This sequence represents a peptide relating to the method for identifying  
CC MHC binding peptides of the invention.

XX ST Protein inhibitor, useful for treating gastrointestinal disorders or  
PT diseases comprises isolated homologous cellular stimulating proteins -  
XX Disclosure; Page 35; 84pp; English.

XX CC The invention relates to a protein inhibitor which comprises homologous  
CC cellular growth stimulating proteins designated gastrokines. The  
CC invention also provides gastric antrum mucosal proteins designated  
CC AMP-18 which belongs to the novel group of gastrokines and nucleic acid  
CC molecules encoding such proteins. Pharmaceutical composition comprising  
CC growth stimulating peptide derived from a gastrokine protein is useful  
CC for treating gastro-intestinal disorder or diseases associated with  
CC overgrowth of gastric epithelia e.g. ulcer. The invention is useful in  
CC cell therapy. The present sequence is human pre-AMP-18 peptide.

 PT Composition comprising human leukocyte antigen binding peptide which  
 PT comprises isolated, prepared epitope useful for treating viral  
 PT infections such as acquired immunodeficiency syndrome, and cancer -  
 XX  
 PS Claim 1; Page 49; 58pp; English.  
 XX  
 CC The present invention describes a composition (I) which comprises at  
 CC least one human leukocyte antigen (HLA) binding peptide comprising an  
 CC isolated, prepared epitope comprising one of 547 8-11 residue amino acid  
 CC sequences (S1), given in AAB75803 to AAB76349. (I) has cytostatic,  
 CC viricide, hepatotropic, antiinflammatory, anti-HIV (human  
 CC immunodeficiency virus) and protozoicide activities, which can be used  
 CC in vaccine production and is an inducer of cytotoxic T-cell response.  
 CC (I) is useful for inducing a cytotoxic T cell response against a  
 CC preslected antigen in a patient expressing a specific major  
 CC histocompatibility complex (MHC) class I allele, by contacting cytotoxic  
 CC T cells (CTLs) from the patient with (I). (I) is useful as a vaccine to  
 CC treat and/or prevent viral infection and cancer such as prostate cancer,  
 CC hepatitis B, hepatitis C, human papilloma virus (HPV) infection,  
 CC cytomegalovirus (CMV), acquired immunodeficiency syndrome (AIDS), renal  
 CC carcinoma, cervical carcinoma, lymphoma, malaria, and condyloma  
 CC acuminatum.

 XX New nucleotide derivatives having energy transfer function - contain  
 PT reporters to serve as donor and acceptor, useful in chain  
 PT termination DNA base sequencing  
 XX  
 PS Example; Page 38; 75pp; Japanese.  
 XX  
 CC The present invention describes nucleotide compounds of formula (I):  
 CC Q-V-CO-R1(NH-W2)-NH(CO-CHR2-NR3)m-W1 (I) Q = mono or oligonucleotide;  
 CC V = C triple bond C-(CH2)nNH or CH=CH(CH2)n2NH; n1, n2, m = integer;  
 CC R1 = trivalent group; R2, R3 = H or hydrocarbyl; or CHR2NR3 = a ring;  
 CC W1, W2 = fluorescent group. Also described is the use of RNA polymerase  
 CC and a mono or oligonucleotide compound (I') as initiator in a chain  
 CC terminator method for DNA base sequencing. (I') has: (i) a 5'-phosphate  
 CC group; and (ii) two reporters capable of serving as a donor and an  
 CC acceptor in energy transfer. (I') including (I) have improved uptake  
 CC efficiency by RNA polymerases and can so be used with RNA polymerases  
 CC as terminators in DNA base sequencing methods. The present sequence  
 CC represents a peptide used in an example from the present invention.

 XX Peptide which mimics human platelet glycoprotein Ib/IX complex  
 PT epitope - also anti-mimotope molecule capable of binding to the  
 PT peptide and useful to modulate platelet adhesion, aggregation or  
 PT agglutination

PS Claim 8; Page 99; 115pp; English.  
 XX The present sequence represents a mimotope which functionally mimics a  
 CC binding site for a monoclonal antibody (Mab) which recognises an epitope  
 CC within the human platelet glycoprotein (gp) Ib/IX complex. More  
 CC specifically the Mab is S2-2. The mimotope peptide can be used for  
 CC raising antibodies, as probes to search for anti-mimotopes and to  
 CC neutralise the inhibitory activity of those antibodies which recognise  
 CC the epitope which is mimicked by the peptide. Anti-mimotopes can be used  
 CC to modulate the adhesion, aggregation or agglutination of platelets by  
 CC affecting von Willebrand factor interaction with the platelets through  
 CC the gp Ib/IX receptor, e.g. as an anti-thrombotic drug which inhibits  
 CC the ristocetin induced aggregation of platelets.

 XX Modified lipolytic enzymes with peptide extensions at one or both  
 PT ends - esp. for use in detergent and dishwashing compsn., have  
 PT improved substrate affinity, stability and wash performance  
 XX Claim 12; Page 179; 197pp; English.  
 XX A lipolytic enzyme, modified by a peptide extension, e.g. the  
 CC present sequence, of its carboxy and/or amino terminus, can be used  
 CC in detergents, particularly in washing powders or dishwashing  
 CC compositions. It may also be used to remove pitch in paper and

CC pulp manufacture, to degrease hides, sheepskins and wool, to  
 CC catalyze organic synthesis, e.g. (trans)esterification or ester  
 CC hydrolysis, in baking and in other degreasing/defaulting processes.  
 CC The peptide extension(s) increases substrate affinity, confers  
 CC stability and especially improves wash performance, i.e. better  
 CC lipid soil removal, reducing the amount of enzyme used.

 XX  
 CC The sequences given in AAW21033-92 are peptides which may be added to  
 CC the N- or C-terminal of the lipolytic enzyme of the invention. The  
 CC lipolytic enzyme, when present in a specified detergent composition,  
 CC is able to remove at least 15% more lard from soiled cotton swatches  
 CC (9 by 9 cm) than an equiv. enzyme-free compsn. in a one-cycle wash  
 CC assay. The assay uses 7 lard-stained cotton swatches in 1000 ml  
 CC water (3.2 mM Ca2+/Mg2+, ratio 5:1; 5 g/l detergent; pH 10 plus 12500 LU  
 CC of enzyme/l) for 20 min at 30 deg.C, in a thermostated Terg-O-to-Meter,  
 CC then 15 min rinsing, drying overnight and soxhlet extn. and  
 CC quantification of fatty material. The enzyme may be used in laundry  
 CC and dishwashing formulations. It is able to remove a substantial  
 CC amount of lard in a single cycle under realistic washing conditions.

 XX Novel therapeutic agents for treating diseases which are related to  
 PT cell proliferation, migration, inflammation and angiogenesis especially  
 PT cancer -  
 XX  
 PS Example 5; Page 41; 91pp; English.  
 XX  
 CC This peptide is used to compete with protein tyrosine phosphatase (PTP)  
 CC PEST for its natural substrates (e.g. p130Cas). PTP-PEST is a soluble  
 CC PTP that is ubiquitously expressed throughout embryonic development and  
 CC in murine adult tissues. The N-terminal portion of the enzyme encodes  
 CC for the catalytic domain, while the C-terminal portion is composed of 5  
 CC proline rich domains, and a binding site for the adaptor protein Shc.  
 CC The pro 2 domain is required for paxillin binding, and the synthesis of  
 CC mutant PTP-PEST have shown that proline 362 is important for paxillin  
 CC binding activity. The invention relates to a compound that is capable of  
 CC interfering with the binding of PTP-PEST to signalling molecules  
 CC (e.g. paxillin) that are involved in cell migration, adhesion or  
 CC division. The compound can be derived from minimal sequences (see  
 CC AAY67254 and AAY67255) found in binding sites of PTP-PEST. The invention  
 CC also relates to a method for finding a genuine substrate for an enzyme in  
 CC a cell that normally expresses the wild type form of the enzyme. A  
 CC mutant version of PTP-PEST (see AAY67251 and AAY67253) is used in this  
 CC method. The compounds have cytostatic and antiinflammatory activity. The  
 CC compounds are used for making medicaments for treating a disease related  
 CC with cell proliferation, migration, inflammation and angiogenesis,  
 CC especially cancer. The novel method is used for identifying a genuine  
 CC substrate for an enzyme.

PT reaction with multivalent recognition complex - polypeptides are  
PT useful in targetted drug selection  
XX  
XX Example 6.3; Fig 24B; 220pp; English.  
PS  
XX Peptides AAW38115-28 are derived from epithelial sodium channel alpha  
CC (ENAC-alpha), beta (ENAC-beta) and gamma (ENAC-gamma) proteins. The  
CC peptides contain PPPPY-like motifs, which are found in the proline rich  
CC regions of WBP-1 and WBP-2 proteins. Peptides containing this residue  
CC bind to the YAP WW domain, but not the WW domain from dystrophin  
CC or to a panel of SH3 domains. Peptides AAW38115-28 were biotinylated and  
CC complexed with alkaline streptavidin, and used in a cross affinity  
CC mapping experiment. They were tested for their ability to bind to the 3  
CC individual novel WW domains of WWP4 (AAW36797), which were expressed as  
CC glutathione-S-transferase expression proteins. The present peptide does  
CC not bind to the WW domains of the WWP4 protein. The WW domain is a  
CC small functional domain. Its name is derived from the observation that  
CC two tryptophan residues, one in the amino terminal portion of the WW  
CC domain and one in the carboxyl terminal portion, are conserved. Most  
CC proteins containing WW domains have a function involving cell signalling  
CC and growth regulation or the organisation of the cytoskeleton.  
CC Polypeptides containing a WW domain are identified by treating a  
CC multivalent recognition unit complex that has selective binding affinity  
CC for a WW domain, with many polypeptides and identifying those with  
CC selective affinity for the complex. Proteins containing WW domains are  
CC used for targeted drug screening, i.e. to identify potential modulators

 PS  
 XX Peptides AAW38063-64 are peptide recognition units that are based on  
 CC the sequences of WW domain binding domains of the alpha and gamma  
 CC subunits of epithelial sodium channel protein. They were used to  
 CC screen a cDNA expression library generated from LNCap prostate  
 CC cancer cell line. A novel human gene WWP4 (AAW36797) was identified. The  
 CC WW domain is a small functional domain found in a large number of  
 CC proteins from a variety of species including humans, nematodes and  
 CC yeast. Its name is derived from the observation that two tryptophan  
 CC residues, one in the amino terminal portion of the WW domain and one in  
 CC the carboxyl terminal portion, are conserved. Most proteins containing  
 CC WW domains have a function involving cell signalling and growth  
 CC regulation or the organisation of the cytoskeleton. Polypeptides  
 CC containing a WW domain are identified by treating a multivalent  
 CC recognition unit complex that has selective binding affinity for a WW  
 CC domain, with many polypeptides and identifying those with selective  
 CC affinity for the complex. Proteins containing WW domains are used for  
 CC targeted drug screening, i.e. to identify potential modulators of  
 CC specific WW domain interactions. The valency of the recognition unit is  
 CC important in determining specificity of interaction with WW domains. In  
 CC multivalent form specificity is relaxed, but not lost, so proteins  
 CC containing WW domains similar, but not identical, to the sequence of the  
 CC peptides' target WW can be detected, including new polypeptides.

 PT  
 XX  
 XX Example; Page 39; 75pp; Japanese.  
 PS  
 XX The present invention describes nucleotide compounds of formula (I):  
 CC Q-V-CO-R1(NH-W2)-NH(CO-CHR2-NR3)m-W1 (I) Q = mono or oligonucleotide;  
 CC V = C triple bond C-(CH2)nmNH or CH=CH(CH2)n2NH; n1, n2, m = integer;  
 CC R1 = trivalent group; R2, R3 = H or hydrocarbyl; or CHR2NR3 = a ring;  
 CC W1, W2 = fluorescent group. Also described is the use of RNA polymerase  
 CC and a mono or oligonucleotide compound (I') as initiator in a chain  
 CC terminator method for DNA base sequencing. (I') has: (i) a 5'-phosphate  
 CC group; and (ii) two reporters capable of serving as a donor and an  
 CC acceptor in energy transfer. (I') including (I) have improved uptake  
 CC efficiency by RNA polymerases and can so be used with RNA polymerases  
 CC as terminators in DNA base sequencing methods. The present sequence  
 CC represents a peptide used in an example from the present invention.

CC cell receptor stimulation. The method comprises contacting the cell or T
CC cell with a Fyb/SLAP complex modulator sufficient to modulate the
CC formation of a complex of an Ena/VASP protein and a Fyb/SLAP protein.
CC The method is useful for modulating cytoskeletal rearrangement in a cell
CC such as a lymphocyte, preferably a T cell, a macrophage or a cell
CC fragment such as a platelet and for modulating T cell response to a
CC T cell receptor stimulation. T cell response is increased in a subject
CC having or at risk of developing infectious disease or cancer and T cell
CC response is inhibited in a subject having or is at risk of developing an
CC autoimmune disease or a condition characterized by inflammation. A
CC composition comprising a Fyb/SLAP complex inhibitor is useful for
CC increasing platelet aggregation for promoting wound healing or
CC clotting. The present sequence represents a peptide derived from
CC ActA, which is used in the course of the invention.

 PT Modulating cytoskeletal rearrangement to regulate T cell and macrophage

PT activation for treating cancer, autoimmune disease, and infectious  
 XX disease, comprises contacting with a Fyb/SLAP complex modulator -  
 PS Example 1; Page 36; 79pp; English.  
 XX  
 CC The present sequence represents an antigenic peptide derived from ActA.  
 CC polyclonal antibodies raised against this peptide were used to screen  
 CC mouse embryo expression library to isolate Fyb/SLAP clones. Fyb/SLAP  
 CC proteins are ligands for the EVH1 domains of  
 CC Ena(enabled)/vasodilator-stimulated phosphoprotein (VASP) proteins.  
 CC The specification describes a method for modulating cytoskeletal  
 CC rearrangement in a cell, or T cell response to T cell receptor  
 CC stimulation. The method comprises contacting the cell or T cell with a  
 CC Fyb/SLAP complex modulator sufficient to modulate the formation of a  
 CC complex of an Ena/VASP protein and a Fyb/SLAP protein. The method is  
 CC useful for modulating cytoskeletal rearrangement in a cell such as a  
 CC lymphocyte, preferably a T cell, a macrophage or a cell fragment such  
 CC as a platelet and for modulating T cell response to a T cell receptor  
 CC stimulation. T cell response is increased in a subject having or at  
 CC risk of developing infectious disease or cancer and T cell response  
 CC is inhibited in a subject having or is at risk of developing an  
 CC autoimmune disease or a condition characterized by inflammation. A  
 CC composition comprising a Fyb/SLAP complex inhibitor is useful for  
 CC increasing platelet aggregation for promoting wound healing or  
 CC clotting.

 XX Composition useful for the modulation of blood cell proliferation in a  
 PT patient comprises a blood cell regulator selected from colostrinin, its  
 PT constituent peptide and/or analog -  
 XX PX Claim 6; Page 25; 51pp; English.  
 XX XX

The invention relates to a composition which comprises a blood cell  
 CC regulator selected from colostrinin, its constituent peptide and/or  
 CC analogue. The invention is used for modulating the oxidative stress  
 CC level in a cell e.g. mammalian or human cell present in a cell culture,  
 CC tissue, organ, or organism; or for treating oxidative damage to the skin  
 CC of a patient e.g. animal or human; to modulate oxidative stress during/  
 CC after a premature birth or normal birth, preventing/delaying aging in a  
 CC patient, enhancing wound healing, and the reduction of side effects of  
 CC cosmetic procedures. The method changes the level of an oxidising species  
 CC in the cell, such as decreases or prevents increase in the level of  
 CC damage to a biomolecule of the patient selected from DNA, protein and/or  
 CC lipid, compared to the same conditions when the oxidative stress  
 CC regulator is not present. The modulation of oxidative stress results in  
 CC enhanced repair, regeneration, and replacement of cells, tissues and  
 CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
 CC external organs), as well as enhanced preservation of such organs for  
 CC transplantation, implantation, or scientific research. The present  
 CC sequence is a colostrinin constituent peptide.

 XX  
 CC The present sequence is that of a colostrinin constituent peptide  
 CC that is preferred for use as an immunological regulator and as a  
 CC blood cell regulator in claimed methods of the invention. Methods  
 CC are claimed for: inducing a cytokine in a cell by contact with an  
 CC immunological regulator, where the cell is present in a cell  
 CC culture, a tissue, an organ or an organism, and the cell is  
 CC mammalian, including human; modulating an immune response in a cell  
 CC by contact with the immunological regulator under conditions  
 CC effective to induce a cytokine; modulating an immune response in a  
 CC patient by administering an immunological regulator under conditions  
 CC effective to induce a cytokine, where the immunological regulator  
 CC is administered topically or as part of a dietary supplement, and  
 CC where the immune response is specific or non specific, an interferon  
 CC response or an antibody response; modulating blood cell proliferation  
 CC by contacting blood cells with a blood cell regulator, where the  
 CC blood cells are present in a cell culture or an organism, are  
 CC mammalian or human, and where the blood cells are increased in  
 CC number or differentiated; and a method for modulating blood cell  
 CC proliferation in a patient. A claimed cytokine-inducing composition  
 CC comprises a pharmaceutical carrier and an active agent such as the  
 CC present peptide. Cytokines induced by this peptide in human  
 CC leucocyte cultures include interferon-gamma, tumour necrosis  
 CC factor-alpha, interleukin-4, interleukin-6 and interleukin-10.

XX PT New monoclonal antibody that binds to adeno-associated virus, useful
XX PT for preparing gene therapy vectors, is used to alter tropism of the
XX PT virus for specific gene delivery -
XX PS Example 1; Page 6; 12pp; German.
XX CC This invention describes a novel monoclonal antibody (MAB), or its
XX CC fragments, that bind to the capsid of an adeno-associated virus (AAV)
XX CC and inhibit binding of AAV to a receptor on its original target cell.
XX CC The products of the invention have anticancer, anti-inflammatory and
XX CC anti-anemic activity. MAB are used to treat AAV that are used for
XX CC directed gene transfer, especially gene therapy of e.g. tumors, cystic
XX CC fibrosis and sickle cell anemia. AAV treated with MAB have altered
XX CC tropism, i.e. they no longer bind to their original host cell but can
XX CC bind to selected target cells, particularly defined by the nature of a
XX CC receptor ligand bound to MAB. The Raji cell line (Burkitt lymphoma) is
XX CC hardly infected by wild-type AAV-2. When recombinant AAV-2 was incubated
XX CC with a bispecific single-chain antibody, comprising the variable heavy
XX CC chain region of an anti-AAV-2 monoclonal antibody and the variable light
XX CC chain region of an anti-CD19 antibody, the treated vectors were able to
XX CC infect Raji cells efficiently. This sequence represents an antigenic
XX CC peptide derived from AAV-2 which is used to illustrate the method of the

XX New isolated LDL-receptor related protein - used to develop products  
 PT for treating, e.g. elevated triglyceride levels, diabetes,  
 PT autoimmune disorders, inflammation or Alzheimer's disease

XX Claim 20; Page 126; 200pp; English.

XX The present invention describes LRP5 (low density lipoprotein (LDL)  
 CC receptor related protein, previously designated LRP-3). The present  
 CC sequence represents a specifically claimed LRP5 protein fragment.  
 CC Nucleic acid molecules (NAMS) encoding LRP5 can be used for determining  
 CC if an individual is susceptible to insulin dependent diabetes mellitus  
 CC (IDDM). The NAMS or proteins can be used for reducing triglyceride levels  
 CC in the serum of an individual. Therapies that affect LRP5 may also be  
 CC useful in the treatment of autoimmune diseases such as  
 CC glomerulonephritis, diseases and disorders involving disruption of

CC endocytosis and/or antigen presentation, cytokine clearance and/or  
 CC inflammation, viral infection, pathogenic bacterial toxin contamination,  
 CC elevation of free fatty acids or hypercholesterolemia, type 2 diabetes,  
 CC osteoporosis, Alzheimer's disease and cardiovascular disease. Products  
 CC from the present invention can also be used for detection, diagnosis and  
 CC drug screening.

XX The sequence represents wheat Gliadin peptide J, corresponding to  
 CC A-gliadin 57-73 and containing a natural polymorphism.  
 CC The peptides of the invention are used to test mammalian (preferably  
 CC human) susceptibility to coeliac disease (gluten intolerance). The  
 CC peptides are contacted with a blood sample and T cell recognition  
 CC measured, a positive T-cell recognition indicating a susceptibility to  
 CC coeliac disease. The peptides are useful for inducing tolerance in an  
 CC individual and antagonists to the peptides are useful for treating or  
 CC preventing coeliac disease in an individual and for producing an antibody  
 CC specific to them or a wild-type sequence. A mutant gliadin protein (or  
 CC its fragment of 15 amino acids in length) whose wild-type sequence can be  
 CC modified by transglutaminase to a sequence that comprises the epitope,  
 CC but which has been modified in such a way that it does not contain  
 CC sequence which can be modified by transglutaminase to a sequence that  
 CC comprise the epitope is useful for decreasing the ability of gliadin  
 CC protein to cause Coeliac disease. Nucleic acids encoding proteins  
 CC antagonistic to the T-cell binding of the epitopes are useful for  
 CC obtaining a transgenic plant cell or seed and for the production of a  
 CC protein. The resultant crop plant is useful for obtaining a product of a

CC wheat plant, especially grain, which is optionally processed into flour  
 CC or another grain product. Food comprising the antagonistic protein is  
 CC useful instead of a wild-type gliadin.

XX PT Identifying polypeptide(s) having specific functional domain (esp. SH3 domain) - comprises detecting selective binding to recognition unit, regardless of sequence homology

XX PS Example; Fig 12B; 174pp; English.

XX CC AAW05445-W05492 represent Src-homology region 3 (SH3) domain binding peptides. These sequences were used as parts of multivalent recognition unit complexes used in the method of the invention. The method of the invention is for identifying polypeptides containing functional domains of interest (especially SH3 domains). It comprises contacting a multivalent recognition unit (RU) complex with a number of peptides and identifying polypeptides having a selective binding affinity for the RU complex. The method is based on functional similarities and does not rely on sequence similarities. Prior methods only gave limited success for identifying proteins containing an SH3 domain due to the minimal sequence homology among known SH3 proteins. Multivalent RU complexes are particularly suited to screening for polypeptides containing functional domains that are similar to, but not identical in sequence to, the original target functional domain. The new method enables proteins having a common function to be identified. Identification of novel SH3 proteins will be useful for a better understanding of cell growth, malignancy, signal transduction processes, etc. New candidate drugs can be identified, and their specificities (e.g. pharmacological activities) can be assessed using the method of the invention.

XX PT Identifying cell signalling and growth regulatory polypeptides by reaction with multivalent recognition complex - polypeptides are useful in targeted drug selection

XX PS Example 6.3; Fig 7; 220pp; English.

XX CC Peptides AAW37653-77 contain PPPY-like motifs. The PPPY motif is found in the proline rich regions of WBP-1 and WBP-2 proteins. Peptides containing this residue have been shown to bind the YAP WW domain, but not the WW domain from dystrophin or to a panel of SH3 domains. Peptides AAW37653-77 were biotinylated and complexed with alkaline streptavidin, and used in a cross affinity mapping experiment. They were tested for their ability to bind to the 12 individual novel WW domains of WWP1 (AAW36794), WWP2 (AAW36795), WWP3 (AAW37696) and WWP4 (AAW36797), which were expressed as glutathione-S-transferase expression proteins. The present peptide, derived from a vinculin protein, does not bind to WW domains of the novel proteins. The WW domain is a small functional domain. Its name is derived from the observation that two tryptophan residues, one in the amino terminal portion of the WW domain and one in the carboxyl terminal portion, are conserved. Most proteins containing WW domains have a function involving cell signalling and growth regulation or the organisation of the cytoskeleton. Polypeptides containing a WW domain are identified by treating a multivalent recognition unit complex that has selective binding affinity for a WW domain, with many polypeptides and identifying those with selective affinity for the complex. Proteins containing WW domains are used for targeted drug screening, i.e. to identify potential modulators of specific WW domain interactions.

XX Src homology region 3 binding peptide - used to activate Src  
XX tyrosine kinase(s) and to stimulate immune response by increasing  
XX production of certain lymphokine(s), e.g. interleukin-1  
XX  
XX Claim 22; Page 90; 131pp; English.  
XX  
XX The present sequence represents a peptide which resembles a Src homology  
XX region 3 (SH3) binding peptide. SH3 binding peptides are selected from:  
XX (a) peptides which bind the SH3 domain of Cortactin; (b) peptides which  
XX bind the middle SH3 domain of Nck; (c) peptides which bind the SH3  
XX domain of Abl; (d) peptides which bind the SH3 domain of Src; (e)  
XX peptides which bind the SH3 domain of PLC gamma; (f) peptides which bind  
XX the SH3 domain of p53bp2; (g) peptides which bind the amino-terminal SH3  
XX domain of Crk; (h) peptides which bind the SH3 domain of Yes; and (i)  
XX peptides which bind the amino-terminal SH3 domain of Grb2. The purified  
XX binding peptides can be used in the method to identify inhibitors of  
XX their binding to their respective SH3 domains, which could be used to  
XX modulate the pharmacological activity of proteins or polypeptide  
XX containing the SH3 domain. The peptides can also be used to activate  
XX Src or Src-related protein tyrosine kinases, to stimulate the immune  
XX response by increasing the production of certain lymphokines, e.g.  
XX tumour necrosis factor-alpha and interleukin-1, or to deliver a  
XX conjugated molecule to certain cellular compartments containing Src or  
XX Src related proteins.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Title: US-09-641-801-13

Perfect score: 6  
Sequence: 1 DSQPPV 6

Scoring table: OLIGO  
Gapop 60.0 , Gapext 60.0

Searched: 127863 seqs, 47026705 residues

Word size : 0  
Total number of hits satisfying chosen parameters: 1220

Minimum DB seq length: 3  
Maximum DB seq length: 20

Post-processing: Listing first 100 summaries

Database : SwissProt\_41.\*

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

CC -!- FUNCTION: MAY ACT AS A NEUROTRANSMITTER OR NEUROMODULATOR AND PLAY
A ROLE IN THE INTEGRATION OF INFORMATION WITHIN THE BRAIN. MAY BE
INVOLVED IN THE CONTROL OF VISCERAL MUSCLES DUE TO ITS ABILITY TO
BEHAVE AS POTENT INHIBITORS OF PERISTALTIC MOVEMENTS. MAY ALSO
FULFILL A NEUROHORMONAL ROLE ON MUSCLES OF THE GUT AND HEART.
CC -!- TISSUE SPECIFICITY: NEURONS WITHIN BRAIN AND ABDOMINAL GANGLION.
CC -!- SIMILARITY: BELONGS TO THE ALLATOSTATIN FAMILY.

XX Inducing a cytokine and modulating an immune response, useful for  
 PT treating central nervous system diseases and bacterial and viral  
 PT infections, comprises administering colostrinin as an immunological  
 PT regulator -

XX Claim 1; Page 34; 50pp; English.

XX Sequences AAB72246 - AAB72275 represent peptides derived from colostrinin,  
 CC a proline rich polypeptide aggregate contained in colostrum. The  
 CC peptides have immune response modulatory activity, and are capable of  
 CC inducing cytokines. Colostrinin and its derived peptides are useful for  
 CC inducing cytokine production, for modulating an immunological response  
 CC and for inducing blood cell proliferation. The peptides are useful in the  
 CC treatment of disorders of the central nervous system, neurological  
 CC disorders, mental disorders, dementia, neurodegenerative diseases,  
 CC Alzheimer's disease, motor neuron disease, psychosis, neurosis, chronic  
 CC disorders of the immune system, bacterial and viral infections and  
 CC acquired immunological deficiencies.

XX Modulating oxidative stress level in a cell, involves contacting the  
 PT cell with an oxidative stress regulator selected from colostrinin, its  
 PT constituent peptide, analog or their combinations -

XX Claim 6; Page 25; 48pp; English.

XX The present invention relates to a method for modulating the oxidative  
 CC stress level in a cell or a patient, comprising contacting the cell with,  
 CC or administering to the patient, an oxidative stress regulator selected  
 CC from colostrinin, or its constituent peptide (e.g. the present peptide),  
 CC to change the level of an oxidising species in the cell. The method can  
 CC be used to treat oxidative damage to skin, by decreasing or preventing an  
 CC increase in the level of damage to a biomolecule of the patient.

CC after a premature birth or normal birth, preventing/delaying aging in a  
 CC patient, enhancing wound healing, and the reduction of side effects of  
 CC cosmetic procedures. The method changes the level of an oxidizing species  
 CC in the cell, such as decreases or prevents increase in the level of  
 CC damage to a biomolecule of the patient selected from DNA, protein and/or  
 CC lipid, compared to the same conditions when the oxidative stress  
 CC regulator is not present. The modulation of oxidative stress results in  
 CC enhanced repair, regeneration, and replacement of cells, tissues and  
 CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
 CC external organs), as well as enhanced preservation of such organs for  
 CC transplantation, implantation, or scientific research. The present  
 CC sequence is a colostrinin constituent peptide.

XX Modulation of blood cell proliferation in a patient involves use of  
 XX blood cell regulator selected from colostrinin, its constituent peptide  
 XX and/or analogue

XX Claim 1; Page 34; 54pp; English.

XX The present sequence is that of a colostrinin constituent peptide  
 CC that is used as an immunological regulator and as a blood cell  
 CC regulator in claimed methods of the invention. The peptide is  
 CC classified as having a beta-casein homologue precursor. Methods  
 CC are claimed for: inducing a cytokine in a cell by contact with an  
 CC immunological regulator, where the cell is present in a cell  
 CC culture, a tissue, an organ or an organism, and the cell is  
 CC mammalian, including human; modulating an immune response in a cell  
 CC by contact with the immunological regulator under conditions

CC effective to induce a cytokine; modulating an immune response in a  
 CC patient by administering an immunological regulator under conditions  
 CC effective to induce a cytokine, where the immunological regulator  
 CC is administered topically or as part of a dietary supplement, and  
 CC where the immune response is specific or non specific; an interferon  
 CC response or an antibody response; modulating blood cell proliferation  
 CC by contacting blood cells with a blood cell regulator, where the  
 CC blood cells are present in a cell culture or an organism, are  
 CC mammalian or human, and where the blood cells are increased in  
 CC number or differentiated; and a method for modulating blood cell  
 CC proliferation in a patent. A claimed cytokine-inducing composition  
 CC comprises a pharmaceutical carrier and an active agent such as the  
 CC present peptide.

XX Promoting cell differentiation in a patient involves use of blood cell  
 XX regulator selected from colostrinin, its constituent peptide and/or  
 XX analog

XX Claim 7; Page 21; 37pp; English.

XX The invention comprises a method for promoting cell differentiation (e.g.  
 CC neural cell differentiation). The method involves contacting cells with a  
 CC neural cell regulator (i.e. a colostrinin peptide) in order to change the  
 CC cells in morphology to form neural cells. Colostrinin is a proline-rich  
 CC polypeptide aggregate that is present in colostrum. The method of the  
 CC invention is useful for promoting the differentiation of cells and for  
 CC treating damaged neural cells in a patient. The present amino acid  
 CC sequence represents a specifically claimed colostrinin peptide used in

CC the method of the invention.

XX Peptides having an N-terminal amino acid sequence isolated from

PT colostrinin for treating e.g. disorders of the central nervous system

PT and immune system, viral and bacterial infections, and diseases

PT characterized by amyloid plaques -

XX Claim 8; Page 27; 63pp; English.

XX The present invention provides the sequences of a number of peptides  
CC found in ewe's colostrinin. Colostrinin is the proline-rich polypeptide  
CC fragment of colostrum. These peptides can be used in the treatment of  
CC central nervous system disorders such as senile dementia, Parkinson's  
CC disease, Alzheimer's disease, psychosis and neurosis, immune system  
CC disorders such as bacterial and viral infections, to improve the  
CC development of a child's immune system, as a dietary supplement, and to  
CC promote the dissolution of beta-amyloid plaques.

PT Soluble fragments of human intercellular adhesion molecule 1 -  
 PT useful for inhibition of binding of leukocytes in immune responses  
 PT e.g. organ transplantation

XX Example 18; Column 47; 70pp; English.

XX ICAM-1 fragments obtained from recombinant expression of truncated  
 CC ICAM-1 coding sequences can be used in the control of adhesion  
 CC events in inflammatory conditions and immune responses. This is  
 CC achieved by the ICAM-1 fragments binding to and inhibiting the  
 CC action of Leukocyte surface molecules e.g. LFA-1 which mediate  
 CC cell-cell adhesion events during immune responses. This inhibition  
 CC is useful for suppressing immune responses after organ  
 CC transplantation or skin grafting. Ligands derived from ICAM-1  
 CC which are possibly recognised by LFA-1 are described in GENESEQ  
 CC records AAW70872-W70880.

PT Novel derivatives of intercellular adhesion molecule-1 (ICAM-1) with  
 PT altered ability to bind lymphocyte function-associated antigen-1  
 PT (LFA-1) -  
 XX

XX Example 18; Column 47; 72pp; English.

XX The present sequence is that of a peptide within the human  
 CC intercellular adhesion molecule-1 (ICAM-1) sequence that is  
 CC possibly recognised by lymphocyte function-associated antigen-1  
 CC (LFA-1). The peptide corresponds to amino acid residues 85-91  
 CC of the ICAM-1 sequence given in ABB76147. ICAM-1 functions as a  
 CC ligand for LFA-1 in lymphocyte interactions with a number of  
 CC different cell types. The invention provides functional derivatives  
 CC of ICAM-1 comprising a soluble fragment of ICAM-1 containing a  
 CC specific amino acid substitution. These have an altered ability to  
 CC bind LFA-1. The invention provides methods for using ICAM-1, its  
 CC functional derivatives, and antibodies, for the treatment and  
 CC diagnosis of inflammation, haematopoietic tumour cell metastasis,  
 CC and ICAM-1-expressing tumours.

PT New scaffold protein, useful for stabilizing antigens used as vaccines  
 PT  
 XX  
 PS  
 XX  
 XX  
 XX  
 CC Sequences AAY40610-Y40619 are functionally equivalent derivatives of the  
 CC A1 peptide (AAY40601) which forms part of a scaffold protein. A1 is a  
 CC beta strand peptide which forms part of a beta sheet. Peptides  
 CC (AAY40601-Y40609) together form a single-chain scaffold protein which  
 CC contains at least 1 disulfide bond, contains less than 10% alpha helix  
 CC and contains at least 6 beta-strands. The scaffold protein is constructed  
 CC of beta strands S1-S6, and may also include beta strands A1-A3, or any  
 CC functionally equivalent derivative of these sequences. The beta strands  
 CC form two beta sheets S1/S4/S3 and S6/S5/S2 with each strand connected to  
 CC the next by hydrogen bonds, which generate a beta sandwich architecture.  
 CC If the additional beta strands A1-A3 are included in the structure the  
 CC scaffold is constructed of two beta sheets, with the structures  
 CC A1/S1/S4/S3 and S6/S5/S2/A2/A3. The beta strands are connected to each  
 CC other via amino acid loops, where at least one of the loops binds to a  
 CC receptor or antigen. The scaffold protein is used to stabilize antigens  
 CC or whole proteins such as receptors, or their fragments. It may be used  
 CC to bind two separate molecules. For example, one surface of the scaffold  
 CC may be bound to a protein which binds to a tumour antigen. This will  
 CC target the complex to tumour cells. Another surface may be bound to a  
 CC cytotoxic molecule or an autoimmune antibody which may then kill the  
 CC tumour cells. Therefore the scaffold protein may be used to target  
 CC chemotherapeutic agents to specific cells. It may also be used to  
 CC stabilize individual peptides in a peptide library and may be used in  
 CC diagnostic techniques, and to stabilize antigens used as vaccines.

XX New isolated human genes and the secreted polypeptides they encode -  
 PT useful for diagnosis and treatment of e.g. cancers, neurological  
 PT disorders, immune diseases, inflammation or blood disorders

XX Claim 11; Page 287; 385pp; English.

XX This sequence represents a secreted human protein encoded by the gene  
 CC clone detailed in the descriptor line. The gene can be used to generate  
 CC fusion proteins by linking to the gene to a human immunoglobulin Fc  
 CC portion (e.g. AAX00602) for increasing the stability of the fused  
 CC protein as compared to the human protein only.

CC The invention relates to 87 novel genes and their fragments (nucleic  
 CC acid sequences: AAX00611-X00724; amino acid sequences AAW67807-W68004)  
 CC which are useful for preventing, treating or ameliorating medical  
 CC conditions e.g. by protein or gene therapy. Also, pathological  
 CC conditions can be diagnosed by determining the amount of the new  
 CC polypeptides in a sample or by determining the presence of mutations in  
 CC the new polynucleotides. Specific uses are described for each of the 87  
 CC polynucleotides, based on which tissues they are most highly expressed in  
 CC (see AAX00611 for described uses).

 PT identify proteins having metalloproteinase-disintegrin activity, and  
 PT inhibitors of the proteins for use in therapeutics -  
 XX  
 XX Example 2; Page 64; 105pp; English.  
 XX  
 CC The present sequence represents a repeat sequence from an alternatively  
 CC spliced snake venom protease-1 (SVPH-1) polypeptide, designated SVPH-1c.  
 CC The SVPH polypeptides are metalloproteinase-disintegrin protein family  
 CC members. The SVPH polynucleotides can be used as probes to identify  
 CC nucleic acids encoding proteins having metalloproteinase-disintegrin  
 CC activity, to identify human chromosome 1 or 4, to map genes on those  
 CC chromosomes, to identify genes associated with diseases, syndromes and  
 CC conditions associated with the chromosomes, and to study proteinases and

CC their activities on cell/cell interactions and the immune system. Sense  
 CC or antisense oligonucleotides of SVPH can be used to inhibit gene  
 CC expression of SVPH 1, 3, or 4. The SVPH polypeptides can be used to  
 CC study cell/cell and cell/matrix interactions involved in cellular  
 CC processes and in the immune system. The polypeptides may also be used to  
 CC screen for inhibitors of the polypeptide's activity, which are used in  
 CC therapeutics. The antibodies can be used in assays to detect the  
 CC presence of the polypeptides in vitro or in vivo, and to purify the  
 CC polypeptides by affinity chromatography.

CC novel protein. The WW domain is a small functional domain. Its name  
 CC is derived from the observation that two tryptophan residues, one in the  
 CC amino terminal portion of the WW domain and one in the carboxyl terminal  
 CC portion, are conserved. Most proteins containing WW domains have a  
 CC function involving cell signalling and growth regulation or the  
 CC organisation of the cytoskeleton. Polypeptides containing a WW domain  
 CC are identified by treating a multivalent recognition unit complex that  
 CC has selective binding affinity for a WW domain, with many polypeptides  
 CC and identifying those with selective affinity for the complex. Proteins  
 CC containing WW domains are used for targeted drug screening, i.e. to  
 CC identify potential modulators of specific WW domain interactions.

XX

PS Example 28; Page 104; 392pp; English.

XX

XX The present invention is concerned with the sequence of the genome of  
 CC the SEN virus (SENV), and the proteins encoded by it. SENV is thought to  
 CC be the cause of hepatopathies which are not linked to the presence of  
 CC the hepatitis A, B and E viruses in man. The genome and proteins of this  
 CC virus can be used in gene therapy and vaccination against the virus,  
 CC which also causes disorders of the gastrointestinal tract, including  
 CC Crohn's disease and lupus erythematosus, inflammatory diseases, and  
 CC proliferative disorders such as cancer. The peptides AAB11549-B11581  
 CC were used in epitope mapping assays to identify the immunologically  
 CC reactive areas of the SENV proteins.

 PT autoimmune disorders, and skin disorders -  
 XX  
 PS Claim 11; Page 373; 413pp; English.

XX Sequences AAB39093-B39141 represent the amino acid sequences of 49  
 CC human secreted proteins encoded by the genes AAC73865-C73913. The genes  
 CC and proteins are useful for preventing, ameliorating or treating medical  
 CC conditions, e.g. by protein or gene therapy. The genes are isolated from  
 CC a range of human tissues disclosed in the specification. The nucleic  
 CC acids, proteins, antibodies and (ant)agonists are useful in the  
 CC diagnosis, treatment and prevention of: (a) cancer, e.g. breast and  
 CC ovarian cancer, and other cancers of the adrenal gland, bone, bone  
 CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital;  
 CC (b) immune disorders e.g. Addison's disease, allergies, autoimmune  
 CC haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus,  
 CC Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative  
 CC colitis; (c) cardiovascular disorders such as myocardial ischaemias;  
 CC (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and  
 CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal  
 CC and parasitic infections.

 XX Isolated human nucleic acids comprising one or more single nucleotide  
 PT polymorphisms, useful for treating a subject suffering from a  
 PT pathology, e.g. autoimmune diseases, ascribed to the presence of a  
 PT sequence polymorphism -

XX Claim 1; Page 631; 674pp; English.  
 XX ABL00010 to ABL01104 represent human nucleic acid oligonucleotides  
 CC comprising one or more single nucleotide polymorphisms (SNPs). ABB56531  
 CC to ABB56903 represent human peptides encoded by some of the SNP  
 CC oligonucleotides. The sequences from the present invention can have  
 CC immunosuppressive, cytostatic, anti-inflammatory, neuroprotective and  
 CC antimicrobial activities. Nucleic acids, polypeptides, oligonucleotides  
 CC and antibodies from the present invention can be used for treating a  
 CC subject suffering from, at risk for, or suspected of, suffering from a  
 CC pathology ascribed to the presence of a sequence polymorphism. The  
 CC pathology may be autoimmune diseases, inflammation, cancer, diseases of  
 CC the nervous system, and infection by pathogenic microorganisms. The SNPs  
 CC are also useful for determining which forms of a characterised  
 CC polymorphism are present in individuals. The antibodies may be used in  
 CC the detection, quantitation and/or cellular or tissue localisation of a  
 CC polymorphic protein (e.g., for use in measuring levels of the  
 CC polymorphic protein within appropriate physiological samples).

 XX New targeting peptides useful for targeting heart and various tumours  
 XX PT and for treating coronary heart diseases, heart failure, infarction,  
 PT myocarditis, ischaemia, restenosis, atherosclerosis, cancer and  
 PT tumour -  
 XX  
 XX Disclosure; Page 6; 53pp; English.  
 PS  
 XX The present invention relates to novel peptides that target heart  
 CC or tumour cells, particularly in humans. The peptides of the invention  
 CC are useful for targeting a target cell, e.g. a heart cell, a tumour  
 CC cell, a metastasis, a tumour vasculature, a colorectal tumour cell or  
 CC a carcinoma tumour cell. The peptides are useful for the study,  
 CC isolation and purification of the cell surface markers to which the  
 CC peptide specifically binds, in diagnostic purposes, and as a therapeutic  
 CC for the treatment of animal or human body. A composition comprising at  
 CC least one therapeutic agent and at least one peptide of the invention,  
 CC or a nucleic acid molecule encoding such a peptide can be used for the  
 CC preparation of a drug for gene transfer. Such compositions are useful for  
 CC the treatment and prevention of any diseases affecting the heart or its  
 CC vasculature (e.g. coronary heart disease, heart failure, hypertrophy,  
 CC infarction, myocarditis, ischaemia, restenosis, atherosclerosis), and  
 CC hyperproliferative disorders (e.g. cancer). The systemic delivery of  
 CC vectors targeted with the peptides of the invention avoid regional  
 CC delivery to the coronary artery that requires an invasive and  
 CC cumbersome operation, and limits the spread of vectors after local  
 CC administration. Systemic administration of peptides of the invention  
 CC allows the targeting of tumours that are difficult to reach surgically.  
 CC AAU18716-AAU18792 represent the human heart and tumour cell targeting  
 CC peptides of the present invention.

 PT autoimmune diseases -  
 XX  
 XX Example 1; Page 13; 91pp; English.  
 PS  
 XX The invention provides isolated antibodies, or antigen-binding portions,  
 CC that are capable of binding to human interleukin-18 (IL-18). The  
 CC antibodies may be used to inhibit human IL-18 activity in, and treat a  
 CC disorder where IL-18 is detrimental in, a human subject suffering from,  
 CC inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,  
 CC inflammatory bowel disease, and osteoarthritis), neurological disorders  
 CC (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and  
 CC stroke), heart failure, myocardial infarction, autoimmune diseases such  
 CC as autoimmune hepatitis and autoimmune neutropenia, and mental disorders  
 CC (e.g., depression and schizophrenia). Treatment with an anti-IL-18  
 CC antibody may occur before, concurrent, or after administration of a  
 CC second agent selected from an antibody, or fragment, capable of binding  
 CC human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids,  
 CC cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory  
 CC agents. The present sequence represents a human IL-18 peptide epitope.

XX Novel compound, useful for detection and/or quantifying the presence of  
PT NK cells, comprises the amino acid sequences of the Nkp30 molecule -  
XX Claim 1; Page 33; 83pp; English.  
XX The invention relates to human Nkp30 receptor and its corresponding cDNA  
CC molecule which is involved in natural cytotoxicity mediated by natural  
CC killer (NK) cells and antibodies that identify the same. Nkp30 receptor  
CC is a member of immunoglobulin super family (Ig-SF). Nkp30 is selectively  
CC expressed on the surface of human mature NK cells. Nkp30 and its cDNA are  
CC useful for detecting and/or quantifying the presence of NK cells in a  
CC biological sample. The invention also provides kits for detecting and/or  
CC quantifying the presence of NK cells, for the selective removal of NK  
CC cells from a biological sample, for the positive and selective  
CC purification of NK cells from a biological sample and for the in vitro  
CC stimulation of NK cell cytotoxicity. The invention further provides a  
CC pharmaceutical composition which is used as a drug for grafting  
CC enhancement, graft versus host (GvH) inhibition, stimulation of graft  
CC versus tumour (Gvt) and especially graft versus leukaemia (GvL), and for  
CC the prevention, palliation and/or therapy of solid or liquid tumours,  
CC such as melanoma, hepatocarcinoma and lung adenocarcinoma, and/or  
CC microorganism, notably viral infection. Nkp30 antibodies are useful for  
CC identifying Nkp30 natural ligands and allow assessment of the level of  
CC surface Nkp30 ligand expressed on an NK-susceptible target cell and the  
CC comparison of this level to the standard physiological one. Hence Nkp30  
CC antibodies are useful in the diagnosis of tumours or of infection.  
CC The present sequence is human Nkp30 receptor immunogenic peptide fragment  
CC which is used for Nkp30 polyclonal antiserum production.

PT tumor, hemopathy, human immunodeficiency virus infection, immunological  
PT disease and various inflammations -  
XX  
PS Example 5; Page 18 (Disclosure); 32pp; Chinese.  
XX  
CC The present invention describes human proteasome p40.5 subunit 20.24 (I).  
CC Also described is a process used for producing (I) using DNA  
CC recombination technology. (I) can be used in the treatment of several  
CC diseases, such as malignant tumour, haemopathy, human immunodeficiency  
CC virus (HIV) infection, immunological disease and various inflammations.  
CC The present sequence represents the N-terminal peptide of (I), which is  
CC used in an example from the present invention.  
XX  
SQ Sequence 15 AA;

PS Claim 1; Page 685; 721pp; English.

XX This sequence represents a secreted human protein encoded by the nucleic acid molecule designated Gene 104 from the human cDNA clone HCUBC79 (deposited as clone ATCC 97901 and ATCC 209047).

CC The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAV59502) for increasing the stability of the fused protein as compared to the human protein only.

CC The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-V59812; amino acid sequences AAW4731-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see AAV59511 for described uses).

XX Isolated nucleic acid molecule encoding a human secreted protein is used in preventing, treating or ameliorating a medical condition -

XX Disclosure; Page 420; 428pp; English.

XX The invention relates to the isolation of genes AAC58990-C59039 encoding the human secreted proteins AAB27560-B27609. This sequence represents a fragment of the protein encoded by the gene given in the descriptor line. The sequence is used as a query sequence for doing BLASTX searches to determine homologous sequence to the protein. The genes and proteins

CC are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

XX
XX New isolated human secreted protein for diagnosing, preventing,
PT treating or ameliorating medical conditions and used as a food additive
PT or preservative -
XX
XX Example 1; SEQ ID No 577; 129pp; English.
PS
XX
XX The invention relates to an isolated protein that is one of 186 human
CC secreted proteins, given in the specification, encoded by one of
CC 309 cDNA sequences also given in the specification. The protein is used
CC in a pharmaceutical composition used to prevent, treat or ameliorate a
CC medical condition in e.g. humans, mice, rabbits, goats, horses, cats,
CC dogs, chickens or sheep. Disorders which are diagnosed or treated include
CC autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative
CC disorders e.g. neoplasms of the breast or liver, cardiovascular disorders
CC e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia,
CC angiogenesis, nervous system disorders e.g. Alzheimer's disease,
CC infections caused by bacteria, viruses and fungi and ocular disorders
CC e.g. corneal infection. The polypeptides can also be used to aid wound
CC healing and epithelial cell proliferation, to prevent skin aging due to
CC sunburn, to maintain organs before transplantation, for supporting cell
CC culture of primary tissues, to regenerate tissues and in chemotaxis. The
CC polypeptides can also be used as a food additive or preservative to
CC increase or decrease storage capabilities, fat content, lipid, protein,
CC carbohydrate, vitamins, minerals, cofactors and other nutritional
CC components. The present sequence represents one of the novel human
CC secreted proteins of the invention.
CC Note: This sequence did not form part of the printed specification,
CC but was obtained in electronic format directly from USPTO at

XX
XX Spatially-addressable set of single exon nucleic acid probes, used to
PT measure gene expression in human lung samples -
XX
XX Claim 27; SEQ ID No 30314; 634pp; English.
XX
XX The invention relates to a spatially-addressable set of single exon
CC nucleic acid probes for measuring gene expression in a sample derived
CC from human lung comprising single exon nucleic acid probes having one of
CC 12614 nucleic acid sequences mentioned in the specification, or their
CC complements or the 12387 open reading frames derived from the 12614
CC probes. Also included are a microarray comprising the novel set of
CC probes; the novel set of probes which hybridise at high stringency to a
CC nucleic acid expressed in the human lung; measuring gene expression in a
CC sample derived from human lung, comprising (a) contacting the array with
CC a collection of detectably labeled nucleic acids derived from human lung
CC mRNA, and (b) measuring the label detectably bound to each probe of
CC the array; identifying exons in a eukaryotic genome, comprising
CC (a) algorithmically predicting at least one exon from genomic sequences
CC of the eukaryote; and (b) detecting specific hybridisation of detectably
CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC having a fragment identical to the predicted exon, the probe is included
CC in the above mentioned microarray; assigning exons to a single gene,
CC comprising (a) identifying exons from genomic sequence by the method
CC above and (b) measuring the expression of each of the exons in several
CC tissues and/or cell types using hybridisation to a single exon
CC microarrays having a probe with the exon, where a common pattern of
CC expression of the exons in the tissues and/or cell types indicates that
CC the exons should be assigned to a single gene; a peptide comprising one
CC of 12011 sequences, mentioned in the specification, or encoded by the
CC probes/open reading frames (ORF). The probes are used for gene
CC expression analysis, and for identifying exons in a gene, particularly
CC using human lung derived mRNA and for the study of lung diseases
CC such as asthma, lung cancer, chronic obstructive pulmonary disease
CC (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary
CC fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease,
CC Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary
CC haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomatosis,
CC pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic
CC pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension
CC and hyaline membrane disease. The present sequence is a peptide/protein
CC encoded by a single exon probe of the invention.
CC Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic
CC format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT New isolated antigenic peptides e.g., for G protein-coupled receptors  
PT (GPCR), useful for diagnosing and designing drugs for treating  
PT conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease,  
PT cancer or autoimmune diseases -

XX  
PS Claim 1; Fig 2; 523pp; English.

XX  
CC The present invention describes antigenic peptides (I) comprising:  
CC (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino  
CC acids. Also described: (1) an assay for the detection of a particular  
CC G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample;  
CC and (2) an isolated antibody having high specificity and high affinity  
CC or avidity for a particular GPCR. (I) can be used as GPCR modulators and  
CC in gene therapy. The antigenic peptides for GPCRs are useful in detecting  
CC an antibody against a particular GPCR, and in the production of specific  
CC antibodies. The peptides and antibodies are also useful for detecting the  
CC presence or absence of corresponding GPCRs. The antigenic peptides for  
CC GPCRs and antibodies are useful for diagnosing and designing drugs for  
CC treating immune-related diseases, growth-related diseases, cell  
CC regeneration-related disease, immunological-related cell proliferative  
CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,  
CC atherosclerosis, bacterial, fungal, protozoan or viral infections,  
CC osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute  
CC inflammation, allergies, Crohn's disease, diabetes, graft versus host  
CC disease, Parkinson's disease, multiple sclerosis, pain, psoriasis,  
CC anxiety, depression, schizophrenia, dementia, mental retardation, memory  
CC loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension,  
CC hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or

CC any other disorder in which GPCRs are involved. The antibodies may be  
CC used in immunoassays and immunodiagnosis. AB242523 to AB242869 encode  
CC GPCR proteins given in ABP81675 to ABP82018, which are used in the  
CC exemplification of the present invention.

PT Human genome-derived single exon nucleic acid probes useful for  
PT analysing gene expression in human adult liver -

XX  
PS Claim 27; SEQ ID No 29610; 658pp; English.

XX  
CC The invention relates to a single exon nucleic acid probe (SENP) (I) for  
CC measuring human gene expression in a sample derived from human adult  
CC liver, comprising one of 13109 defined nucleotide sequences given in the  
CC specification (or complements/ fragments). The probe hybridises at high  
CC stringency to a nucleic acid molecule expressed in the human adult  
CC liver. (I) may be used for predicting, measuring and displaying gene  
CC expression in samples derived from human adult liver. The genes  
CC identified may be involved in genetic liver diseases such as cirrhosis,  
CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which  
CC is associated with coronary heart disease. ABG47348-ABG59930 represent  
CC human liver single exon encoded peptides of the invention.

PS Claim 15; SEQ ID No 23272; 530pp; English.  
XX  
CC The present invention relates to single exon nucleic acid probes for  
CC measuring human gene expression in a sample derived from human heart (see  
CC ABA21535-ABA41305). The present sequence is a protein encoded by one such  
CC probe. The probes may be used for predicting, measuring and displaying  
CC gene expression in samples derived from the human heart via microarrays.  
CC By measuring gene expression, the probes are useful for predicting,  
CC diagnosing, grading, staging, monitoring and prognosing diseases of the  
CC human heart and vascular system e.g. cardiovascular disease,  
CC hypertension, cardiac arrhythmias and congenital heart disease.  
CC Note: The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences.

 XX Claim 27; SEQ ID No 21940; 487pp; English.  
 PS  
 XX

CC The present invention relates to human single exon nucleic acid probes  
 CC (SENP; see AAI10068-AA128459). The present sequence is a peptide encoded  
 CC by one such probe. The SENPs are derived from human Hela cells. The SENPs  
 CC can be used to produce a single exon microarray, which can be used for  
 CC measuring human gene expression in a sample derived from human cervical  
 CC epithelial cells. By measuring gene expression, the probes are therefore  
 CC useful in grading and/or staging of diseases of the cervix, notably  
 CC cervical cancer.  
 CC Note: The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences.

XX New pro-apoptotic p53-inducible protein, useful for treating diseases  
 PT associated with abnormal cell proliferation, e.g. cancer or eczema, or  
 PT for determining p53 activity and/or p53 responsiveness to cancer drug  
 PT therapy -

XX Claim 17; Page 63; 89pp; English.

XX The invention describes a p53-inducible polypeptide, or its functionally  
 CC active fragments, derivatives or homologues. The nucleotide sequence  
 CC encoding the p53-inducible protein is useful in microarrays, DNA arrays  
 CC or DNA chips, or for determining p53 activity and/or p53 responsiveness  
 CC to cancer drug therapy from a biopsy. The nucleotide sequence is also  
 CC useful for determining a loss of expression of the p53-inducible gene  
 CC (particularly by RT-PCR), for isolating and identifying a promoter  
 CC and/or regulatory sequence (7634s) associated with any of the sequences,  
 CC for identifying and isolating agents (e.g. chemical compounds) that  
 CC promote apoptosis, or in the manufacture of a medicament for treating  
 CC diseases associated with abnormal proliferation of cells. These diseases  
 CC include cancer or eczema. The p53-inducible protein is useful for  
 CC treating diseases associated with abnormal cell proliferation, or in the  
 CC manufacture of a medicament for treating cancer. The treatment also  
 CC includes the application of an adenovirus containing the nucleotide  
 CC sequence encoding the p53-inducible protein. This is the amino acid  
 CC sequence of a mouse scotin peptide used in the production of anti-scotin  
 CC antibodies.

 PT Spatially-addressable set of single exon nucleic acid probes, used to  
 PT measure gene expression in human lung samples -  
 XX  
 PS Claim 27; SEQ ID No 28564; 634pp; English.  
 XX  
 CC The invention relates to a spatially-addressable set of single exon  
 CC nucleic acid probes for measuring gene expression in a sample derived  
 CC from human lung comprising single exon nucleic acid probes having one of  
 CC 12614 nucleic acid sequences mentioned in the specification, or their  
 CC complements or the 12387 open reading frames derived from the 12614  
 CC probes. Also included are a microarray comprising the novel set of  
 CC probes; the novel set of probes which hybridise at high stringency to a  
 CC nucleic acid expressed in the human lung; measuring gene expression in a  
 CC sample derived from human lung, comprising (a) contacting the array with  
 CC a collection of detectably labeled nucleic acids derived from human lung  
 CC mRNA, and (b) measuring the label detectably bound to each probe of  
 CC the array; identifying exons in a eukaryotic genome, comprising  
 CC (a) algorithmically predicting at least one exon from genomic sequences  
 CC of the eukaryote; and (b) detecting specific hybridisation of detectably  
 CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,  
 CC having a fragment identical to the predicted exon, the probe is included  
 CC in the above mentioned microarray; assigning exons to a single gene,  
 CC comprising (a) identifying exons from genomic sequence by the method  
 CC above and (b) measuring the expression of each of the exons in several  
 CC tissues and/or cell types using hybridisation to a single exon  
 CC microarrays having a probe with the exon, where a common pattern of  
 CC expression of the exons in the tissues and/or cell types indicates that  
 CC the exons should be assigned to a single gene; a peptide comprising one  
 CC of 12011 sequences, mentioned in the specification, or encoded by the  
 CC probes/open readings (ORF). The probes are used for gene

CC expression analysis, and for identifying exons in a gene, particularly  
 CC using human lung derived mRNA and for the study of lung diseases  
 CC such as asthma, lung cancer, chronic obstructive pulmonary disease  
 CC (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary  
 CC fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease,  
 CC Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary  
 CC haemorrhoidosis, pulmonary histiocytosis, lymphangioleiomyomatosis,  
 CC pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic  
 CC pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension  
 CC and hyaline membrane disease. The present sequence is a peptide/protein  
 CC encoded by a single exon probe of the invention.  
 CC Note: The sequence data for this patent did not form part  
 CC of the printed specification, but was obtained in electronic  
 CC format directly from WIPO at

XX Ameliorating glutamic acid decarboxylase associated autoimmune
PT disorders such as insulin dependent diabetes mellitus and Stiff man
PT disease -
XX Claim 1; Column 42; 61pp; English.
XX
CC This sequence represents a fragment of the glutamic acid decarboxylase 65
CC (GAD65) protein. The invention relates to a method of ameliorating GAD
CC associated autoimmune disorders by administering a GAD65 peptide to the
CC patient. The method can be used for ameliorating GAD associated
CC autoimmune disorders such as IDDM (insulin dependent diabetes mellitus)
CC and Stiff man disease. GAD65 can also be useful for screening drugs that
CC alter GAD function, for generating monoclonal antibodies and in
CC immunoassays. GAD65 is an effective diagnostic tool for predicting IDDM
CC and the diagnosis is quite easy. It is also possible to obtain much
CC larger quantities of polypeptide via recombinant techniques than are
CC available from natural sources.

New targeting peptides identified by phage display, useful for treating  
a disease state, e.g. cancer, diabetes, inflammatory disease, or  
atherosclerosis, autoimmune disease, bacterial or viral infection or  
cardiovascular disease

Example 3; Page 82; 269pp; English.

The invention describes an isolated peptide of 100 amino acids or less  
in size. The peptide is useful for treating a disease state, e.g. cancer,  
arthritis, diabetes, inflammatory disease, atherosclerosis, autoimmune  
disease, bacterial infection, viral infection, cardiovascular disease  
or degenerative disease. This sequence represents a human targeting  
peptide selective for human organs, tissues or cell types.

XX PT Enterotoxin(s) of Shigella flexneri and DNA encoding them - used to  
 PT isolate antibodies and to develop non-reactogenic vaccine.

XX PS Example; Table 2, page 32; 88pp; English.

XX CC Large-scale prepn. of Shigella flexneri 2a enterotoxin was  
 CC undertaken in order to obtain sufficient material for further  
 CC characterization and analyses. Three bands were selected on the  
 CC basis of enterotoxin activity. These bands had approx. MW of 63 kDa,  
 CC 52 kDa and 41 kDa. The N-terminal sequences of these bands were  
 CC analysed. AAR76701 shows the N-terminal sequence of both the 63 kDa  
 CC and the 53 kDa bands in which the proposed A:B subunit ratios are  
 CC 1:3 and 1:2 respectively. The N-terminal sequence of the 41kDa band  
 CC is given in AAR76702. The proposed A:B subunit ratio of this band is  
 CC 1:1. A definitive extended sequence could not be determined from the  
 CC material available for any of the three bands. However, the  
 CC identical putative AA sequence was found for the first four  
 CC residues of all three bands. Moreover, the data derived suggested  
 CC that two distinct N-termini were being identified.  
 CC (Updated oh 25-MAR-2003 to correct PN field.)

 XX PT New growth hormone releasing peptides, useful for treating e.g.  
 PT dwarfism, osteoporosis, burns, wounds, cachexia, atherosclerosis or  
 PT cardiac disorders or for increasing muscle, milk, wool or fur  
 PT production in animals -  
 XX Claim 29; Page 20; 63pp; English.  
 XX CC The invention comprises peptides that promote the release of growth  
 CC hormone. The growth hormone releasing peptides of the invention are  
 CC useful for promoting the release and elevation of blood growth hormone  
 CC (GH) levels. The peptides of the invention can be used to treat  
 CC hypothalamic pituitary dwarfism, osteoporosis and burns. The peptides of  
 CC the invention can also be used for: promoting wound healing; promoting  
 CC recovery from surgery or from acute/chronic debilitating illnesses;  
 CC prevention/reduction of cachexia in cancer patients; decreasing  
 CC atherosclerosis, improving cardiac performance in congestive heart  
 CC failure, or to improve sleep. The peptides of the invention can further

CC be used to enhance body growth in animals, enhance milk production in  
 CC cows and enhance wool/fur production in mammals. The peptides of the  
 CC invention can also be used diagnostically (e.g. to discover the loss of  
 CC GH receptor functioning). The present amino acid sequence represents a  
 CC growth hormone releasing peptide of the invention.

XX

CC The sequence represents a tetrapeptide ligand selected according to  
 CC 2 (12-7) fractional factorial design +3 cp (or 1 cp 2 random), which  
 CC were used to model the interaction of a ligand with its target. The  
 CC invention relates to characterizing the interaction between a Ligand Y  
 CC and a Target X by obtaining information (e.g. Multivariate Quantitative  
 CC Structural Activity Relationships, MQSAR) representing one or more  
 CC physical and/or chemical properties of targets of type X and type Y  
 CC to produce a model of interaction. The methods of the invention are  
 CC useful for identifying outliers of type X or outliers  
 CC of type Y, drug design, design or identification of lead compounds (e.g.  
 CC by high throughput screening, HTS), design of ligands of type Y with  
 CC improved affinity and/or selectivity for targets of type X, protein  
 CC engineering, design of DNA or RNA molecules, design of artificial targets  
 CC of type X/or artificial ligands of type Y, analysis and/or in the  
 CC engineering of regions and/or parts of targets of type X and/or ligands  
 CC of type Y, design of organic compound, catalyst, pharmaceutical, drug,  
 CC macromolecule being capable of binding a molecule, peptidomimetic,  
 CC protein, enzyme, antibody, molecule, macromolecule, DNA, RNA or a  
 CC carbohydrate. The methods are also useful for designing new ligands for

CC known targets and/or for new targets.

CC The invention relates to a recombinantly produced protein of 30-250 kD  
 CC comprising at least 50% (by number of amino acids (aa)) of a naturally  
 CC occurring repeat unit, of 3-20 aa, from a naturally occurring  
 CC structural protein (especially silk fibroin and elastin, also  
 CC collagen and fibronectin (FCB)). The recombinant proteins are useful,  
 CC e.g. as structural components of prosthetic devices or synthetic fibres.  
 CC The physical properties of the protein can be adjusted by varying  
 CC the combination of repeat units, and the protein may retain the  
 CC properties of natural proteins while also having additional properties.  
 CC The present sequence is a structural protein repeat unit suitable  
 CC for incorporation into the protein of the invention.

XX Transfection agent that comprises a peptide comprising hydrophobic and  
PT hydrophilic domain and having amino acid residues of specified length  
PT is useful for a non-covalent association with and transport of a  
PT heterologous compound into a cell -

PS Example 2; Page 61; 156pp; English.

XX The invention relates to a transfection agent comprising a peptide of  
CC about 16 - 30 amino acids in length. Peptides of the invention comprise  
CC a hydrophobic domain, a hydrophilic domain, optionally a spacer sequence  
CC between the domains and a functional group conjugated to at least one  
CC terminal of the peptide. Peptides of the invention are useful for a  
CC non-covalent association with and transport of a heterologous compound  
CC into a cell. They are also useful for promoting the cellular  
CC internalisation of at least one member e.g. peptide, proteins,  
CC antibodies, their derivatives and/or conjugates. They may form part of a  
CC pharmaceutical composition to deliver the compound selected from a  
CC diagnostic or therapeutic compound, to treat at least one condition such  
CC as cancer or an infectious disease, or which targets a cancerous cell or  
CC pathogen-infected cell and to deliver a peptide or inhibitor that  
CC disrupts the activity of the enzyme. The agent of the invention has a  
CC transfection efficiency of at least 5% for at least two of the members of  
CC the group of the compounds. The agent has a good delivery efficiency for  
CC a broad spectrum of compounds and cell types, has a low toxicity, are  
CC easy to handle and easy to formulate in conjunction with the many  
CC different compound types that it can deliver. The peptides are serum  
CC sensitive, thus they bode particularly well for systemic and/or localised  
CC in patients. The current sequence represents a linker peptide that is  
CC used in the synthesis of new peptide vectors.

 XX Method for inhibiting or reducing signal transduction - utilises  
 PT peptide or corresp. nucleic acid which decreases association of  
 PT PI 3- or 4- kinase with CD4/p56lck  
 XX  
 PS Example; Page 32; 46pp; English.  
 XX  
 CC In order for certain T cells to make an optimal response to antigen,  
 CC it is necessary for the T cell surface antigen CD4 to couple to the  
 CC protein-tyrosine kinase p56lck. (CD4-p56lck is known to associate  
 CC with and functionally synergise with the Tcr/CD3 complex.) CD4-p56lck  
 CC complex in T cells associates with two lipid kinases: PI 3-kinase  
 CC and PI 4-kinase, which suggests that these lipid kinases are also  
 CC involved in intracellular signalling via the T cell receptor complex.  
 CC The interaction of a lipid kinase, such as PI 3-kinase or PI 4-  
 CC kinase, with CD4-p56lck, may be blocked by administering a peptide.  
 CC This peptide may be a fragment of the cytoplasmic domain of CD4  
 CC (eg AAR60987-R60991), a fragment of p56lck (eg AAR60992, AAR60993),  
 CC a fragment of PI 3-kinase (eg AAR60994, AAR60995), or a fragment of  
 CC PI 4-kinase. Other proline-rich peptides that bind to SH3 binding  
 CC sequences can also be used, such as the fragment of  
 CC 3BP1 protein that binds to the SH3 of the Abl kinase (AAR60997), or  
 CC a sequence found in the SOS protein (AAR60999).

 PT of T-cell malignancies  
 PT  
 XX  
 PS Claim 5; Column 37; 32pp; English.  
 XX  
 CC AAR83781-R83783 are N-terminal peptides of a new lymphokine molecule  
 CC known as the monocyte cytotoxicity inducing factor (MCF). Purified  
 CC MCF is capable of inducing human monocytes to a cytotoxic state. The  
 CC N-terminal peptides fragments of MCF are useful in the treatment of  
 CC cancer (leukaemia or solid tumours) and infectious disease partic.  
 CC those where the pathogen is present in phagocytes, e.g. tuberculosis  
 CC and leishmaniasis. Also antibodies may be raised to identify MCF in  
 CC blood for diagnosis or evaluation of T-cell malignancies. The  
 CC peptides have equivalent activity to MCF but are easier and less  
 CC expensive to prepare, penetrate tissue better and are less likely  
 CC to invoke an immune responses.

 XX Penta:peptide(s) useful as platelet aggregation inhibitors - derived  
 PT from freeze-dried and ground green barley leaves  
 PT  
 XX Claim 2; Page 10; 22pp; English.  
 PS  
 XX A composition has been developed consisting of a pentapeptide. The  
 CC present sequence represents a specifically claimed pentapeptide derived  
 CC from freeze-dried and ground green barley leaves. The pentapeptide can  
 CC be used for inhibiting blood platelet aggregation in mammals, e.g. by

CC parental administration at doses of 0.1-10 mg/kg.

XX PT Detection of human inducible nitric oxide synthase - using an

PT immunoassay in which a sample is contacted with a specific binding

PT entity reactive with human iNOS or mimics.

XX PS Example 4; Page 38; 93pp; English.

XX CC This invention describes an immunoassay method where a sample with a

CC specific binding entity (e.g. a monoclonal antibody) reactive to human

CC inducible nitric oxide synthase (iNOS) or mimics of this protein is used

CC to detect the presence of human iNOS protein in the sample. The method

CC can be used for the detection and quantitation of human iNOS in cells and

CC tissues for various pathological conditions such as sepsis, septic

CC shock, myocardial infarction, rejection of tissue in organs following

CC transplantation, monitoring "flare ups" in certain autoimmune diseases

CC such as lupus, psoriasis, and multiple sclerosis. This sequence

CC represents a peptide from human iNOS which is used in the method of the

CC invention.

# OM protein - protein search, using sw model

Run on: November 25, 2003, 18:02:54 ; Search time 3.3883 Seconds  
(without alignments)  
97.154 Million cell updates/sec

Title: US-09-641-801-14

Perfect score: 7

Sequence: 1 DPPPPQS 7

Scoring table: OLIGO

Gapop 60.0 , Gapext 60.0

Searched: 127863 seqs, 47036705 residues

Word size : 0

Total number of hits satisfying chosen parameters: 1220

Minimum DB seq length: 3

Maximum DB seq length: 20

Post-processing: Listing first 100 summaries

Database : SwissProt\_41.\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## SUMMARIES

Result No.	Score	Query Match	Length	ID	Description
